NOTIFICATION-39-ACM/04/2020 dtd. 09.09.2020

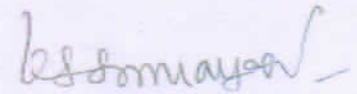

Sub: Starting of new programmes of BCA and B.Sc.

Ref: Resolution of the Academic Council at its 39th meeting held on 27.08.2020
vide agenda-14

The Academic Council at its 39th meeting held on 27.08.2020 and subsequently the Board of Management at its 50th meeting held on 28.08.2020 have resolved to approve the proposal for starting of the following 3 years BCA and B.Sc. programmes (Choice Based Credit System) under the Faculty of Science along with other running courses of B.Sc. and BCA.

1. BCA (Cyber Forensics, Data Analytics and Cyber Security) with an annual intake of 210
2. BCA (Robotics, Machine Learning and Artificial Intelligence) with an annual intake of 140
3. B.Sc. (Forensic Science, Data Analytics and Cyber Security) with an annual intake of 140

This notification issued for implementation with effect from the academic year 2020-21

BSc (Forensic Science) (Data Analytics and Cyber Security)

This is a full time three-year degree course, on the new area of technology - Cyber Forensic. In order to control the criminal activities in the money transactions, e-commerce, website management, social networking etc., every public/private sector organization require the service of a cyber-security expert. Cyber/Computer Forensics or Digital Forensics is the process of extracting information and data from computers while investigating a cybercrime. Experts in Forensic analyse the digital media with the aim of identifying, preserving, recovering and presenting facts and findings. There is a high demand of forensic experts in the police and vigilance departments, investigating agencies, detective agencies. An opportunity as teachers where criminology is taught is another bright option. The curriculum of the course includes, Programming practices in C++, Java, Internet Technology & Cyber Laws, Hands on sessions in Internet Programming & Computer Security, Biometric security, Preserving and Recovering Digital Evidence, Ethical Hacking & Digital Forensic Mobile & Wireless Security, Security Threats and vulnerabilities etc. Students will be exposed to real-world problems, open-end problems and simulated real-life scenarios with active guidance from domain experts in this field.

The rise in the widespread use of technology paves a way to rise in cybercrime. For hackers, the possibilities have increased exponentially, along with the potential rewards like ransomware. Hence being cautious about the situation, the internet experts paying attention by investing a lot of time and money in predicting cyber security trends. This programme aims to provide a foundational platform for Cyber Security aspirants by providing Cyber Security Awareness and Training that heighten the chances of catching a scam or attack before it is fully enacted, minimizing damage to the resources and ensuring the protection of information technology assets. The programme focuses to cover all cyber security landscapes theoretically and practically. This course provides a range of career opportunities in Cyber Security Sectors as Network/Application Security Analyst, Cyber Security Analyst, Cyber Security Analyst (Soc) Security Automation, Cyber Security Practitioner, Cyber Defense Analyst, Penetration Tester, Information Security Engineer in leading IT Industries and to act as Cyber Security Experts in in Governmental Organizations.

Programme Outcomes

Yenepoya University proposes to conduct B.Sc (Forensic Science, Data Analytics and Cyber Security); The programme will help the students to:

- Comprehend the various security threats and vulnerabilities of the cyber world keeping in line with industrial trends.
- Scale up to the demand from multiple industrial sectors on the cyber world to promote effective methods, practices and tools to counter the cybercrimes.

- Architect, design and implement fool-proof product line in the field of cyber security.
- Highlight the importance of forensic science for perseverance of the society.
- Exhibit knowledge to secure corrupted systems, protect personal data, and secure computer networks in an Organization.
- Practice with an expertise in academics to design and implement security solutions.
- Understand key terms and concepts in Cryptography, Governance and Compliance.
- Develop cyber security strategies and policies.
- To emphasize the importance of scientific methods in crime detection.

Programme Specific Outcomes

Upon successful completion of the programme, candidates will be familiar with cyber security landscapes and able to:

1. Analyze and evaluate the cyber security needs of an organization.
2. Determine and analyze software vulnerabilities and security solutions to reduce the risk of exploitation.
3. Critically interpret data, write reports and apply the basic rules of evidence.
4. To evaluate forensic investigation methods and laws relevant to forensic science.
5. Measure the performance and troubleshoot cyber security systems
6. Implement cyber security solutions and use of cyber security, information assurance, and cyber/computer forensics software/tools.
7. Comprehend and execute risk management processes, risk treatment methods, and key risk and performance indicators
8. Design and develop security architecture for an organization.
9. Design operational and strategic cyber security strategies and policies.

1. Duration of the Course:

The duration of the course shall be three years. Each academic year shall be divided into two semesters. The first academic year shall comprise the first and second semesters, the second academic year, the third and fourth semesters, and the third academic year as the fifth and sixth semesters.

2. Eligibility:

A candidate who has passed the two years of Science Pre-University Examination conducted by the Pre-University Education Board in the State of Karnataka or any other examination considered as equivalent thereto by University is eligible for admission to these programmes.

- * Passed Class XII from a recognized Board in science stream.
- * The admission will be done on merit basis taking into consideration the aggregate marks obtained in the following three subjects:
 - (i) Physics
 - (ii) Chemistry
 - (iii) Mathematics

3. Selection Process:

Application forms will be available in the official website of Yenepoya University (www.yenepoya.edu.in) and the college office for the applicants. A merit list will be prepared of selected candidates based on the 12th class marks /PUC marks. Reservation of seats will be followed as per the university Bye Laws.

4. Total Intake of Students: 140 students will be registered per year for the course.

5. Medium of Instruction: The medium of instruction and examination shall be English.

6. Minimum Course Curriculum for Undergraduate Courses under Choice Based Credit System

Ministry of Human Resource Development (HRD), Govt. of India, has already initiated the process for developing New Education Policy (NEP) in our country to bring out reforms in Indian education system. University Grants Commission (UGC) participates more actively in developing National Education Policy, its execution and promotion of higher education in our country. The UGC has already initiated several steps to bring equity, efficiency and academic excellence in National Higher Education System. The important ones include innovation and improvement in course- curricula, introduction of paradigm shift in learning and teaching pedagogy, examination and education system.

The education plays enormously significant role in building of a nation. There are quite a large number of educational institutions, engaged in imparting education in our country. Majority of them have entered recently into semester system to match with international educational pattern. However, our present education system produces young minds lacking knowledge, confidence, values and skills. It could be because of complete lack of relationship between education, employment and skill development in conventional education system. The present alarming situation necessitates transformation and/or redesigning of education system, not only by introducing innovations but developing “learner-centric approach in the entire education delivery mechanism and globally followed evaluation system as well.

Majority of Indian higher education institutions have been following marks or percentage based evaluation system, which obstructs the flexibility for the students to study the subjects/courses of their choice and their mobility to different institutions. There is need to allow the flexibility in education system, so that students depending upon their interests and aims can choose inter-disciplinary, intra-disciplinary and skill-based courses. This can only be possible when choice based credit system (CBCS), an internationally acknowledged system, is adopted. The choice based credit system not only offers opportunities and avenues to learn core subjects but also exploring additional avenues of learning beyond the core subjects for holistic development of an individual. The CBCS will undoubtedly facilitate us bench mark our courses with best international academic practices. The CBCS has more advantages than disadvantages.

Advantages of the choice based credit system

Shift in focus from the teacher-centric to student-centric education.

Student may undertake as many credits as they can cope with (without repeating all courses in a given semester if they fail in one/more courses).

CBCS allows students to choose inter-disciplinary, intra-disciplinary courses, skill oriented papers (even from other disciplines according to their learning needs, interests and aptitude) and more flexibility for students).

CBCS makes education broad-based and at par with global standards. One can take credits by combining unique combinations. For example, Physics with Economics, Microbiology with Chemistry or Environment Science etc.

CBCS offers flexibility for students to study at different times and at different institutions to complete one course (ease mobility of students). Credits earned at one institution can be transferred.

Choice Based Credit System (CBCS)

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it is necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions within India to begin with and across countries. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations, the UGC has formulated the guidelines to be followed.

1. Outline of Choice Based Credit System

Core Course A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.

2. Elective Course Generally a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/ subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate's proficiency/skill is called an Elective Course.

Discipline Specific Elective (DSE) Course Elective courses may be offered by the main discipline/subject of study is referred to as Discipline Specific Elective. The University/Institute may also offer discipline related Elective courses of interdisciplinary nature (to be offered by main discipline/subject of study).

Dissertation/Project An elective course designed to acquire special/advanced knowledge, such as supplement study/support study to a project work, and a candidate studies such a course on his own with an advisory support by a teacher/faculty member is called dissertation/project.

Generic Elective (GE) Course An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.

P.S. A core course offered in a discipline/subject may be treated as an elective by other discipline/subject and vice versa and such electives may also be referred to as Generic Elective.

3. Ability Enhancement Compulsory Courses (AECC) The Ability Enhancement (AE) Courses may be of two kinds Ability Enhancement Compulsory Courses (AECC) and Skill Enhancement Courses (SEC). "AECC" courses are the courses based upon the content that leads to Knowledge enhancement; i. Environmental Science and ii. English/MIL Communication.

These are mandatory for all disciplines. SEC courses are value-based and/or skill-based and are aimed at providing hands-on-training, competencies, skills, etc.

Ability Enhancement Compulsory Courses (AECC) Environmental Science, English Communication/MIL Communication.

Skill Enhancement Courses (SEC) These courses may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge. Introducing Research Component in Under-Graduate Courses.

Project work/Dissertation is considered as a special course involving application of knowledge in solving / analyzing /exploring a real life situation / difficult problem. A Project/Dissertation work would be of 6 credits. A Project/Dissertation work may be given in lieu of a discipline specific elective paper.

7. Attendance and Change of Subjects:

- A candidate shall be considered to have satisfied the requirement of attendance for a semester if he/she attends not less than 75% of the number of classes held in all subjects, including EC & CC.
- A candidate who does not satisfy the requirement of attendance in more than two subjects in a semester shall not be permitted to take the whole (all papers/subjects) University examination of that semester and he/she shall seek re-admission to that semester in a subsequent year and fulfil the attendance requirements of all subjects.
- A student having an attendance shortage in any two subjects (whatever may be the credits or type e.g. Theory /practical) will not be allowed to write the examination of those two subjects, during that semester.
- The student will enrol by paying a casual term fee of Rs. 7000/- per subject and will undertake remedial classes held during the semester vacation (either summer or winter) and fulfil the attendance requirement and take the examination when offered according to odd or even semester.
- A student seeking readmission due to shortage of attendance in 3 subjects and more per semester will not be permitted to carry forward the tuition fee. The student will pay the entire tuition fee of the semester.
- A student having the required attendance % in all subjects and fails to pass the subject in a semester is permitted to carry over all subjects and will attempt the exam as offered during the odd or even semester as a resit candidate
- Whenever a change in a subject is permitted the attendance in the changed subject shall be calculated by taking into consideration the attendance in the previous subject studied by the candidate.
- If a candidate represents his/her Institution/University/ Karnataka State/ Nation in Sports/ NSS/ Cultural or any officially sponsored activities he/she may be permitted to claim attendance for actual number of days participated, based on the recommendation of the Head of the Institution concerned. If a candidate is selected to participate in national level events such as Republic Day Parade etc., he/she may be permitted to claim attendance for actual number of days' participation based on the recommendation of the head of the Institution concerned.

8. Teaching Learning Methodology

The instructors will choose the pedagogy according to the course content and its applications from the methods provided below.

Lectures, Class discussions, reading assignments, Discussion groups. Lecture-demonstration, Student Presentation, Panel discussion by student panels from the class. Student reports by individuals, Student-group reports. Debate (informal) on current issues by students Forums Bulletin boards, Small groups such as task oriented, discussion, Textbook assignment. Reading assignments in journals, monographs, Assignment to outline portions of the textbook, Assignment to outline certain supplementary readings, Debates (formal). Crossword puzzles Maintaining Portfolios / Diaries. Reports on published research studies, Library research on topics or problems. Written book reports by students, Interviews, Audio-tutorial lessons, Open textbook study, Committee projects--small groups, Individual projects, Quiz, Use of dramatization, skits, plays (street plays), Student construction of diagrams, charts, or graphs, making of posters by students, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Use of motion pictures, educational films, videotapes. Use of recordings (Ted Talks). Role playing, peer teaching. Coaching: special assistance provided for students having difficulty in the course. VIVA, filling out forms (income tax, checks). Visit an "ethnic" locations or commercial establishments or community. On the job training, specialize in other countries and in India Visit an employment agency. Campaigning, Volunteering, Prepare mock newspaper on specific topic or era, an entrepreneurial activity. Writing reports or project proposals.

The instructor would provide specific details of the methodology at the beginning of the course as applicable to each Unit, some teaching methods are -

Problem-based learning, learning tasks, discovery learning, computer simulation, Project work, direct instruction or lectures, models method, Programmed instructions, learning by teaching, Case study, learning at stations on PC and LAN network, Presentations through any applications.

Experiments, trials, Role play, Jigsaw and crosswords, concept mapping, Guidelines text methods, Web Quest, Reciprocal learning and portfolio methods.

9. Examination Structure for Written exam

Examination/Assessment	Marks
Internal Assessment	25
Final Examination	75
Total	100

10. Internal Assessment (IA)

Internal Assessment for each course, and details for each test are notified well in advance. IA consists of the following:

SN	Internal Assessment for 25 marks	Weightage
1	One Internal examination	15
2	Assignment/Seminars/Viva-voce/ Research Papers Presentation/ Class Participation /Attitude	10
	Total	25

11. The marks of the internal assessment shall be published on the notice board of the college for information of the students.

12. Registration for Examinations

A candidate shall register for all the papers of a semester when he/she appears for the examination of that semester for the first time.

13. Conduct of Examinations

There shall be examinations at the end of each semester, ordinarily during November/December for odd semesters and during April/May for even semesters, as prescribed in the Scheme of Examinations.

14. Examination Scheme / Assessment Question Pattern for the internal exam will be as below

Section A	Objective Questions	25 questions x 1 mark each	25 Marks
Section B	Short Answers or case	5 Questions x 5 marks each	25 Marks
Total			50 Marks

15. A) Examination Scheme / Assessment Question Pattern for the end semester exam will be as below

Section A	Objective Questions	25 questions x 1 mark each	25 Marks
Section B	Analytical Questions/Illustrations/ case studies/essay type questions	5 Questions x 10 marks each	50 Marks
Total			75 Marks

B) Examination Scheme for

1	Constitution of India	Objective Questions
2	Human Rights, Gender Equity and Environmental Studies	Objective Questions
3	Intellectual Property Rights	Objective Questions
4	Environmental Studies	Objective Questions

C) Marks for N.S.S., Sports and Games, Other Co-Curricular, Extra-Curricular activities and students who have received meritorious awards will be considered as per UGC regulations.

D) **Continuous Internal Assessment (CIA):** Individual faculty will design the assessment for CIA. There will be no internal or final exam and the marks will be out of 100.

E)

Question paper pattern

Duration: 3 Hours

Max. Marks:75

Section A

Answer the following Questions

(1*25=25)

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.
- 11.
- 12.
- 13.
- 14.
- 15.
- 16.
- 17.
- 18.
- 19.
- 20.
- 21.
- 22.
- 23.
- 24.
- 25.

Section B

Answer any FIVE of the Questions

(10 *5=50)

- 26.
- 27.
- 28.
- 29.
- 30.
- 31.
- 32.
- 33.

16. Minimum for a Pass

No candidate shall be declared to have passed the Semester Examination (except in Co-curricular and extracurricular activities) unless he/she obtains not less than 40% marks in the aggregate of written examination and internal assessment put together in each of the subjects. There is no minimum mark in Internal Assessment, but Candidate should get minimum 40% in external examination. If a candidate fails in any subjects, he/she shall appear for that subject only at any subsequent regular examination, within the maximum 6 years from date of registration prescribed for completing the programme.

17. Evaluation/Challenge Evaluation

All theory examination papers will be evaluated by one examiner. There will a scope for reevaluation of the papers, where the students can apply by submitting an application along with the necessary fee.

18. With Holding of Results

Results will be withheld when a student has not paid his/her dues or there is a case of disciplinary action pending against him/her.

19. Carry Over

A candidate who fails in a lower semester examination may go to the higher semester and take the examination.

20. Rejection of Results

A candidate may be permitted to reject the result of the whole examination of any semester. Rejection of result paper-wise/subject-wise shall not be permitted. A candidate who has rejected the result shall appear for the immediately following regular examination.

The rejection shall be exercised only once in each semester and the rejection once exercised cannot be revoked.

Application for rejection along with the payment of the prescribed fee shall be submitted together to the controller of examination of university through the College with the original statement of marks within 30 days from the date of publication of the result.

A candidate who rejects the result is eligible for only class and not for ranking.

21. Transfer of Admission

Transfer of admissions to other university is permissible only on mutual agreement with the other university. A candidate migrating from any other university may be permitted to join III/V Semester of the degree programme provided he/she has passed all the subjects of previous semesters/years as the case may be. Such candidates must satisfy all other conditions of eligibility stipulated in the regulations of Yenepoya University. Conditions for transfer of admission of students of other universities

He/she shall fulfil the attendance requirements as per the Yenepoya University Regulations.

His / Her transfer of admission shall be within the intake permitted to the college.

The candidate who is migrating from other universities is eligible for overall class and not for ranking. He / She shall complete the programme as per the regulation governing the maximum duration of completing the programme.

22. Grade Points - Choice Based Credit System (CBCS)

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses are evaluated following the grading system, which is considered to be better than the conventional marks system. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations is followed as per the UGC formulated guidelines. The CBCS syllabus is framed with not more than 20 % deviation. at the maximum The papers are marked in a conventional way for 100 marks. The marks obtained are converted to a 10-point scale (if it is 50 marks paper 5point scale).

Grade Point = Actual Marks scored out of 100/10.

Range of Marks:

Absent	Below 4	4 - 4.49	4.5 - 4.99	5 - 5.99	6 - 6.99	7 - 7.99	8 - 8.99	9 - 10
0	0	4	5	6	7	8	9	10

Grade Point Weightage (GPW): Grade points of each paper multiplied by credits assigned to the subject.

GPW= Grade point X Credits

The Semester Grade Point Average (SGPA) - is the sum of the product of the credits with the grade points scored in all subjects divided by the total credits in the semester.

$SGPA = \frac{\sum \text{Credits} \times \text{Grade Points}}{\text{Total Credits}}$

Minimum SGPA for a pass is 4.

If a student has not passed in a subject or is absent then the SGPA is not assigned.

The Cumulative Grade Point Average (CGPA) - is the weighted average of all the subjects undergone by a student over all the six semesters of a course.

$CGPA = \frac{\sum \text{Total credits in the semester} \times SGPA}{\text{Total credits of the course}}$. SGPA and CGPA will be rounded off to two decimal places. Interpretation of SGPA/ CGPA/ Classification of final result for a UG course.

Grade Point and Class Description:

Letter Grade	Grade Point	Range of mark
O (Outstanding)	10	9.00-10
A+ (Excellent)	9	8.00 - 8.99
A (Very Good)	8	7.00 -7.99
B+ (Good)	7	6.00 - 6.99
B (Above Average)	6	5.00 - 5.99
C (Average)	5	4.50 - 4.99
P (Pass)	4	4.00 - 4.49
F (Fail)	0	Below 4
Ab (Absent)	0	0

22. Details of Course Structure and Assessment:

B.Sc (Forensic Science) (Data Analytics, Cyber Security)

Semester – I								
Course Code	Course Name	Load Allocation			Marks Distribution		Total Marks	Credits
DC01FSC-1C1	Fundamentals of Information Technology -Theory	4	-	-	25	75	100	4
DC01FSC-1P1	Fundamentals of Information Technology - Practical	-	-	4	CIA		100*	2
DC01FSC-1C2	Computer System Architecture - Theory	4	-	-	25	75	100	4
DC01FSC-1P2	Computer System Architecture-Practical	-	-	4	CIA		100*	2
DC01FSC-1C3	Soft Skills & Business Communication	2	-	-	CIA		100*	2
DC01FSC-1C4	Introduction to Forensic Science	4	-	4	25	75	100	6
DC01FSC-1C5	Social Responsibility and Community engage	2	-	-	CIA		100*	2
Total		16	-	12			700	22
Semester – II								
DC01FSC-2C1	Programming Fundamentals using C++	4	-	-	25	75	100	4
DC01FSC-2P1	Programming Fundamentals using C++	-	-	4	CIA		100	2
DC01FSC-2C2	Database Management System	4	-	4	25	75	100	4
DC01FSC-2P2	Database Management System	4	-	4	CIA		100	2
DC01FSC-2C3	Environmental Studies	2	-	-	25	75	100	2
DC01FSC-2C4	Criminalistics	4	-	4	25	75	100	6
	Open Elective							
DC01FSC-2OE1	Trace evidences in crime scene investigation	2	-	-	25	75	100	2

DC01FSC-2OE2	Questioned Document Analysis					5		
DC01FSC-2OE3	Police Administration and Crime Investigative Agencies							
DC01FSC-2OE4	SWAYAM							
	Total	16	-	12			700	22

Semester – III

DC01FSC-3C1	Introduction to Cyber Forensics & Cyber Laws	4	-	-	25	75	100	4
DC01FSC-3C2	Data Structures	4	-	-	25	75	100	4
DC01FSC-3C3	Operating Systems	4	-	-	25	75	100	4
DC01FSC-3P	Operating Systems	-	-	4	CIA		100	2
DC01FSC-3C4	Research Methodology	2	-	-	25	75	100	2
DC01FSC-3C5	Forensic Dermatoglyphics	4	-	-	25	75	100	4
DC01FSC-3P5	Forensic Dermatoglyphics	-	-	4	CIA		100	2
	Total	18	-	8			700	22

Semester – IV

DC01FSC-4C1	Mobile Forensics	4	-	-	25	75	100	4
DC01FSC-4C2	Biometric Security	4	-	-	25	75	100	4

DC01FSC-6C5	Ethics in Information Technology and Computer Communication	2	-	-	25	75	100	2
	Total	16	4	8			600	22
Grand total credits of (I,II,III,IV,V and VI Semester)							4000	132

*Continuous Internal Assessment (CIA).

OR

BFC 405D SWAYAM Course related to the above mentioned electives

23. SWAYAM Course Guidelines (For Students) Minimum 8 credits and a maximum of 20 credits of MOOC credits is permitted.)

Guidelines for opting MOOC subjects as elective or open elective (Any of the 4 credit or 2 credit subjects) Core 6 credit courses are not electives.

1. At the time of selecting any Elective or Open Elective, student can opt for a MOOC subject of same credit or one credit less.

2. Process for opting MOOC subject by the student:

Student identifies a MOOC subject on SWAYAM portal (<https://swayam.gov.in>).

Student informs Departmental SWAYAM Coordinator (DSC) about it.

DSC gives the code of the subject to the student.

Students will apply online through SMS or mobile app.

After the process the student enrolls/registers in the subject on SWAYAM portal (<https://swayam.gov.in>).

Student will inform DSC after registering and enrolling on SWAYAM portal.

3. After the completion of the subject, a copy of the certificate of completion with the marks obtained is to be submitted to the DSC.

4. Credit Conversion: If credit for MOOC subject taken by the student matches with the credit of Departmental elective or Open elective then no conversion is needed and same breakup for CA (online assignments) and ESE (Proctored exam) will be taken.

End Semester Exam (ESE) 50 Marks	Continuous Assessment (CA) 50 Marks			
	Proctored Exam (as per MOOC mark sheet scaled to 50)	Online Assignments (as per MOOC mark sheet)	Presentation 1 (to be conducted by departmental committee)	Presentation 2 (to be conducted by departmental committee)
Marks distribution	50	25	10	15
Marks required to Pass	ESE(out of 50) + Online assignment (out of 25)=30 marks		P1+P2=11 marks	

SEMESTER I
DC01FSC-1C1 Fundamentals of Information Technology

Credit- 4

Goal: To impart the knowledge about the evolution of computers, classification, various peripherals of computers, types of software's etc.

Objectives: By the end of this course, a student will

- Identify various devices and their working principles.
- Define various computer applications.
- Develop programming languages.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Computer Basics and Architecture

Computer Basics: Introduction, Characteristics computers, Evolution computers, Generation of computers, Classification of computers, the computer system, Application of computers.

Computer Architecture: Introduction, Central processing Unit- ALU, Registers, Control Unit, system bus, main memory Unit, cache memory, communication between various Units of a computer system.

Components inside a computer system – System case, Power supply, Mother board, BIOS, Ports and Interfaces, Expansion card, Ribbon cable, Memory chips, Processors.

Unit 2 Computer memory and storage

Computer memory and storage: Introduction, memory representation, memory hierarchy, Random access memory, Types of RAM, Read-only memory, Types of ROM, RAM, ROM and CPU interaction.

Secondary Storage: Types of secondary storage device - Magnetic tape, magnetic disk, Floppy disk, Hard disk, Advantages and disadvantages of magnetic disk, Optical disk, Types- CD, DVD, Blu ray disk, Advantages and disadvantages of optical disk, Magneto-optical disk, Memory stick, , Universal serial bus, Mass storage devices.

Unit 3 Input devices and Output devices

Input devices: Introduction, Types of input devices, Keyboard, Mouse, Introduction to Track ball, Joystick light pen, Touch screen and track pad. Speech recognition, digital camera, webcam, flatbed scanner, Optical character recognition, Optical Mark Recognition, Magnetic ink character recognition, Bar code reader.

Output devices: Types of output, Classification of output devices, Printers- Dot

matrix, drum printer, Ink jet, Laser, Hydra, Plotter, Monitor- CRT, displaying graphics on CRT, Colour display on CRT, LCD, Differences between LCD and CRT, Other types of monitors, Voice response, Projector, Electronic white board.

Unit 4 Computer programming languages

Introduction to Computer programming languages, developing a program, Program development cycle, Types of programming languages, generation of programming languages, Features of a good programming language. Computer software: Introduction, software definition, relationship between software and hardware, software categories, Installing and uninstalling software, software piracy, software terminologies. Word processing software, Spreadsheet software: Excel environment, copying cells using Fill handle, dragging cells, Formulas and functions, Inserting Charts, sorting.

Presentation software: Introduction, PowerPoint environment, creating a new presentation, working with different views, using masters, adding animation, adding transition, running slides. Microsoft Access: Access environment, Database objects.

Unit 5 Overview of Electronic Commerce

Main Activities, definition, Goal, Components, Advantages and disadvantages, Technical architecture, E-Com applications, E-Com and Electronic business. Network infrastructure: Evolution of the Internet, Business use, LAN, MAN, WANs. OSI Model: Introduction to OSI Model, Seven Layers, Overview of TCP/IP reference model.

Suggested Reading:

- Sharma, A. K. (2018). Computer fundamentals and programming in c.
- Norton, P. (2005). Peter Norton's Introduction to Computers. Mcgraw-Hill Education.
- Goel, A., & Mittal, A. (2015). "Computer Fundamentals and Programming in C", Dorling Kindersley (India) Pvt. Ltd., Pearson Education in South Asia, 2011.
- ESL, I. (2012). Introduction to Information Technology. Pearson Education India.

Practical: Based on MS Office

Credit- 2

- Prepare a word document for inserting picture, bulleting, numbering, formatting, border shading.
- Prepare document for word art, drop cap, columns, text box, symbols, equation of any mathematical series.
- To create a resume.
- Prepare a Power point presentation on a technical topic.
- Create a student table with the following details: name, address, class attendance,
- Create a EMPLOYEE data base having D.A.H.R A, income tax, Net Pay
D.A = 10% of basic pay
H.R.A – if basic pay is less than 25,000 H.R.A 10% of basic else H.R.A 25% of basic.
Gross= D.A+H.R.A+Basic Pay
Provident fund = 12% of basic pay.

DC01FSC-1C2 Computer System Architecture

Credit- 4

Goal: This course will enable the students to conceptualize the basics of organizational and architectural issues of a digital computer. To analyze performance issues in processor and memory design of a digital computer. To understand various data transfer techniques in digital computer. To analyze processor performance improvement using instruction level parallelism

Objectives: By the end of this course, a student will

- Understand basic structure of computer.
- Perform computer arithmetic operations.
- Control Unit operations.
- Design memory organization that uses banks for different word size operations.
- Explain the concept of cache mapping techniques.
- Describe the concept of I/O organization.
- Conceptualize instruction level parallelism.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Introduction

Logic gates, Boolean algebra, combinational circuits, circuit simplification, flip-flops and sequential circuits, decoders, multiplexers, registers, counters and memory Units.

Unit 2 Data Representation and Basic Computer Arithmetic

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

Unit 3 Basic Computer Organization and Design

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

Unit 4 Central Processing Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

Unit 5 Memory Organization:

Cache memory - Associative memory - mapping.

Unit 6 Input-Output Organization

Input / Output: External Devices, I/O Units, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

Suggested Reading

2. M Morris Mano, & Ciletti, M. D. (2018). Digital design. Pearson.
3. Hamacher, V. C. (2012). Computer organization and embedded systems/Carl Hamacher...[et al.]. New York, NY: McGraw-Hill.
4. Dos, A. J. (2004). Assembly language and computer architecture using C++ and Java. Brooks/Cole.
5. Stallings, W. (2019). Computer organization and architecture: designing for performance. Pearson.

PRACTICAL:

Credit- 2

Students are advised to do laboratory/practical practice not limited to, but including the following types of problems:

- General study of Basic & Universal gates
 - AND
 - OR
 - NOT
 - NOR
 - NAND
 - XOR
 - XNOR
- Simple Boolean Expression using Basic gates and Universal gates: $A \cdot (B+A) + B \cdot A$
- Design Half-Adder, Full-Adder, Half-Subtractor, Full-Subtractor Circuit.
- Parallel Adder (2-bit, 3-bit) Circuit.
- Implement logic functions in SOP form using Multiplexer.
- Implement De-multiplexer.
- Implement 7- Segment Display with Decoder.
- Implement Parity Generator (Odd & Even)
- Implement Magnitude Comparator (1-bit, 2-bit, 3-bit)
- Circuit Design and implementation of Flip-Flops (SR, JK, D) using ICs
- Circuit design and implementation of Decoder (2x4) and Encoder (4x2) using ICs

DC01FSC-1C3 Soft Skills & Business Communication

Credit- 4

Goal: This course will enable the students to sharpen the Analytical, Written, non-verbal, Spoken Communication and interpersonal Skills essential in organizations involving Decision making and implementation, to demonstrate good team work and negotiation skills.

Objectives: By the end of this course, a student will

- Hone the communication skills of the student to meet the changing and challenging demands of modern professional environment
- Reinforce presentation skills and professionalism
- Build a strong base for good interpersonal relationship and communication skills
- Create awareness about all areas of multiple intelligences

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Use of flip chart board by instructor as aid in teaching, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Communication in Business

Importance of Communication, Forms of Communication, Communication Network of the Organization; Process of Communication: Different Stages, Difference between Oral and Written Communication.

Oral Communication Skills

Fundamentals, Barriers and Gateways, Public Speaking, Effective Power point presentation, body language, non-verbal, facial expressions, voice modulation, eye contact, audience research, questions from the audience, communication and emotional intelligence, creativity in oral communication, Communication through Telephonic, video and Skype, Group Discussion.

Unit 2 Non Verbal and Inter Cultural Communication

Importance of non-verbal communication, personal appearance, facial expressions, movement, posture, gestures, eye contact –voice, beliefs and customs, worldview and attitude.

Written Communication Skills: Writing an Effective Report: Stages of Writing, Style and Tone; Five W's and one H of Report Writing, Divisions, Numbering and use of Visual Aids, creativity in written communication, use of picture, diagram in written communication, Writing Commercial Letters, E- Mail Messages, maintaining a Diary, Job applications & resume writing.

Unit 3 Listening Skills

Importance and need, types, active and empathic listening, listening and judgment, developing skills, listening and understanding, Anatomy of poor Listening, Features of a good Listener

Communication in Business: Systems approach, forms, functions and principles of communication, management and communication, communication patterns, barriers to communication, interpersonal perception – SWOT analysis, Johari Window, Transactional Analysis.

Unit 4 Interpersonal Communication skills

Advantages and disadvantages of utilizing the team work; characteristic features of successful teams; stages of the development of a team; team roles; challenges in team working, forms of non-team behaviour. Conditions of negotiating; strategies of negotiating (win-win, win-loss); participative negotiations; negotiating tactics; cognition and emotions in negotiating; negotiating and ethics, Types and sources of conflicts; the influence of various cultures on the solving of conflicts.

Unit 5

Prose:

A Snake in the Grass

R K Narayan

Poetry:

On his Blindness

John Milton

Suggested Reading:

DC01FSC-1C4 Introduction to Forensic Science

Credits: 4

Goals: To introduce the student to the various scientific disciplines involved in the collection and analysis of evidence in criminal investigations. Includes the principles and practices of forensic sciences in the criminal justice system

Objectives: After studying this paper the students will know –

- The significance of forensic science to human society.
- The fundamental principles and functions of forensic science.
- The divisions in a forensic science laboratory.
- The working of the forensic establishments in India and abroad.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1: History of Development of Forensic Science in India

Functions of forensic science. Historical aspects of forensic science. Definitions and concepts in forensic science. Scope of forensic science. Need of forensic science. Basic principles of forensic science. Frye case and Daubert standard.

Unit 2: Tools and Techniques in Forensic Science

Branches of forensic science. Forensic science in international perspectives, including set up of INTERPOL and FBI. Duties of forensic scientists. Code of conduct for forensic scientists. Qualifications of forensic scientists. Data depiction. Report writing.

Unit 3: Organizational set up of Forensic Science Laboratories in India

Hierarchical set up of Central Forensic Science Laboratories, State Forensic Science Laboratories, Government Examiners of Questioned Documents, Fingerprint Bureaus, National Crime Records Bureau, Police & Detective Training Schools, Bureau of Police Research & Development, Directorate of Forensic Science and Mobile Crime Laboratories. Police Academies. Police dogs. Services of crime laboratories. Basic services and optional services.

Unit 4: Role of Forensic Evidence in the Legal System

Physical Evidence - definition, types, significance, collection, preservation, packing and forwarding of different evidence to the forensic laboratory. Bloodstain Pattern Analysis -

terminology, Blood physics, Spatter patterns, Motion and directionality, point of origin and point of convergence, preservation of blood evidence, procedures and precautions
Presentation of Expert Evidence, Evidence in The Court of Law, Report writing & Evidence presentation, Components of reports and report format (according to ISO/IEC17025:2005).

Practicals

Credits: 2

1. To study the history of crime cases from forensic science perspective.
2. To cite examples of crime cases in which apprehensions arose because of Daubert standards.
3. To review the sections of forensic science at INTERPOL and compare with those in Central Forensic Science Laboratories in India. Include suggestions for improvements if any.
4. To study the annual reports of National Crime Records Bureau and depict the data on different type of crime cases by way of smart art/templates.
5. To write report on different type of crime cases.
6. To review how the Central Fingerprint Bureau, New Delhi, coordinates the working of State Fingerprint Bureaus.
7. To examine the hierarchical set up of different forensic science establishments and suggest improvements.
8. To examine the list of projects undertaken by the Bureau of Police Research and Development and suggest the thrust areas of research in Police Science.
9. To compare and contrast the role of a Police Academy and a Police Training School.
10. To compare the code of conduct prescribed by different establishments for forensic scientists.

Suggested Readings

DC01FSC-1C5
Social Responsibility and Community Engagement

Goal:

Credit 2

This paper will help the students

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Learning Outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

Course Content:

Unit 1 Appreciation of Rural Society

(08 hours)

Rural lifestyle, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages" (Gandhi), rural infrastructure.

Assignment: Prepare a map (physical, visual or digital) of the village you visited and write an essay about inter-family relations in that village.

Teaching/ Learning Methodology

1. Interactive Lectures (03 hours)
2. Self-directed learning (03 hours)
3. Field activities (02 hours)

Unit 2 Understanding rural economy & livelihood

(08 hours)

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets.

Assignment: Describe your analysis of rural household economy, its challenges and possible pathways to address them.

Teaching/ Learning Methodology

1. Interactive Lectures (02 hours)
2. Self-directed learning (02 hours)
3. Field activities (04 hours)

Unit 3 Rural Institutions

(07 hours)

Traditional rural organizations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

Assignment: How effectively are Panchayat raj institutions functioning in the village? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual)

Teaching/ Learning Methodology

1. Interactive Lectures (02 hours)
2. Field activities (05 hours)

Unit 4 Rural Development Programmes

(07 hours)

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swach Bharat, PM AwaasYojana, Skill India, Gram Panchayat Decentralized Planning, NRLM, MNREGA, etc.

Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community; give suggestions about improving implementation of the programme for the rural poor.

Teaching/ Learning Methodology

1. Interactive Lectures (01 hour)
2. Field activities (04 hours)
3. Assignment (02 hours)

Assessment: - Feedback, MCQs, Submission & presentation of project work/Survey findings

Continuous Internal Assessment (CIA)

Internal Assessment is continuous and details are notified well in advance. CIA consists of the following

SN	Assessment for 100 marks	Marks
1	Objective type questions	20
2	Presentation / Survey Findings	50
3	Assignment/Seminars/Viva-voce/ Class Interaction/Attitude	20
4	Log Book	10

Recommended field-based practical activities:

- Interaction with SHG women members and study of their functions and challenges; planning for their skill building and livelihood activities
- Visit MGNREGS project sites interact with beneficiaries and interview functionaries at the work site
- Field visit to Swach Bharat project sites conduct analysis and initiate problem solving measures
- Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)
- Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource embolization
- Visit Rural Schools/mid-day meal centres study Academic and infrastructural

resources and gaps

- Participation Gram Sabha meetings and study community participation
- Associate with Social audit exercise at the Gram Panchayat level, and interact with programme beneficiaries
- Attend Parent Teacher Association meetings and interview school drop outs
- Visit local Anganwadi Centre and observe the services being provided
- Visit local NGOs civil society organizations and interact with their staff and beneficiaries,
- Organize awareness programmes health camps Disability camps and cleanliness camps
- Conducts oil health test drinking water analysis energy use and fuel efficiency surveys
- Raise understanding of people's impacts of climate change building up community's Disaster preparedness
- Organize orientation programmes for farmers regarding organic cultivation rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
- Formation of committees for common property resource management village pond Maintenance and fishing

Credit: 2 credit, 30 hours, at least 50% in field, compulsory for all students

Contents: Divided into four Modules, field immersion is part of each Unit

Course Structure: 2Credits Course (1Credit for Class room and Tutorials and 1Credit for Field Engagement)

Suggested Readings

Books:

1. Katar Singh, & Anil Shishodia. (2016). *Rural development. 4e : principles, policies and management*. Sage Publications..

Journals:

1. Journals of Rural development, (published by NIRD &PR Hyderabad)
2. Indian Journal of Social Work, (by TISS,Bombay)
3. Indian Journal of Extension Education(byIndianSocietyofExtensionEducation)
4. Journal of Extension Education (by Extension EducationSociety)
5. Kurukshetra (Ministry of Rural Development,GoI)
6. Yojana (Ministry of Information and Broadcasting,GoI)

Semester II
DC01FSC-2C1 Programming Fundamentals using C++

Credit- 4

Goals: This course is aimed at enabling students to perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs. Demonstrate adeptness of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching.

Objectives: By the end of this course, a student will,

- Understand concepts of objects and their significance in real world
- Investigate software problem in terms of objects and entities
- Learn to co-relate relationship among different entities involved in a system
- Find dependency and roles in an environment
- Develop software in terms of objects, associations, and integrity constraints
- Generalize and aggregate business entities and transform behavior into functions
- Identify, understand and analyze various sample development models

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Principles of OOP

Software Crisis – Software Evolution – Programming Paradigms. Object Oriented Technology- Basic concepts and benefits of OOP – Application of OOP, OOP Languages.

Introduction to C++: History of C++, Structure of C++, Application of C++, tokens, keywords, identifiers, basic data types, derived data types, derived data types, symbolic constant, dynamic initialization, Suggested Reading variables, scope resolution operator, type modifiers, type casting operators and control statements, input and output statements in C++, Function prototyping and components, Passing parameters: Call by reference, Return by reference, Inline function, Default arguments, Over loaded function.

Unit 2 Classes and Objects- Class specification, Member function definition – nested member function, access qualifiers, static data members and, member functions. Instance creation – Array of objects - Dynamic objects - Static Objects – Objects as arguments -Returning objects

Unit 3 Constructors and Destructors: Constructors- Parameterized constructors, Overloaded Constructors, Constructors with default arguments, copy constructors, Destructors.

Operator Overloading: Operator function-overloading unary and binary operators, overloading the operator using Friend function, Stream operator overloading, Data conversion.

Unit 4 Inheritance: Defining derived classes. Single Inheritance - Protected data with private inheritance - Multiple Inheritances - Multi Level Inheritance - Hierarchical Inheritance. Hybrid Inheritance - Constructors in derived and base Class -Abstract classes - Virtual function and Dynamic polymorphism -Virtual destructor - Nested Classes.

Unit 5 Functions in C++

Virtual functions- need for Virtual function, Pure Virtual functions, Generic Programming with Templates. Introduction, function templates, overloaded function templates, user defined templates arguments, class templates, Inheritance of class templates.

Credit -2

Practical:

Object Oriented Programming Using C++ LAB

- Write a C++ program to find the sum of individual digits of a positive integer.
- A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C++ program to generate the first n terms of the sequence.

- Write a C++ program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
- Write a C++ program to find the factorial of a given integer 5. Write a C++ program to find the GCD of two given integers
- Write a C++ program that uses a recursive function for solving Towers of Hanoi problem.
- Write a C++ program to implement call by value and call by Suggested Reading parameters passing
- Write a C++ program to implement function templates
- Write a program to implement Overloading and Overriding
- Write a C++ program to implement the matrix ADT using a class. The operations supported by this ADT are:
 - a. Reading a matrix.
 - b. Printing a matrix
 - c. Addition of matrices
 - d. Subtraction of matrices
 - e. Multiplication of matrices
- Write C++ programs that illustrate how the Single inheritance, Multiple inheritance Multi level inheritance and Hierarchical inheritance forms of inheritance are supported.
- Write a C++ program that illustrates the order of execution of constructors and destructors when new class is derived from more than one base class
- Write a C++ program that illustrates how run time polymorphism is achieved using virtual functions

DC0FSC-2C2 Data Base Management System

Credit - 4

Goal: This course will enable the students to understand and use a relational database system, to introduce the students to Databases, Conceptual design using ERD, Functional dependencies and Normalization, Relational Algebra is covered in detail. To learn how to design and create a good database and use various SQL operations.

Objectives: By the end of this course, a student will

- Master the basic concepts and understand the applications of database systems.
- Construct an Entity-Relationship (E-R) model from specifications and to transform to relational model.
- Construct unary/binary/set/aggregate queries in Relational Algebra.
- Understand and apply database normalization principles.
- Construct SQL queries to perform CRUD operations on database. (Create, Retrieve, Update, Delete)
- Understand principles of database transaction management, database recovery, security.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Database Systems

Introducing the database and DBMS, Files and File Systems, Problems with file System and advantages of Database Management systems.

Data Models: The importance of Data models, Data Model Basic Building Blocks, Business Rules, The evaluation of Data Models, Degree of Data Abstraction.

Unit 2 The Relational Database Model

A logical view of Data, Keys, Integrity Rules, Relational Set Operators, The Data Dictionary and the system catalog, Relationships within the Relational Database, Data Redundancy revisited, Indexes, Codd's relational database rules.

Entity Relationship Model: The ER Model, Developing ER Diagram.

Unit 3 Normalization of database tables

Database Tables and Normalization, The need for Normalization, The Normal forms and High level Normal Forms, denormalization.

Unit 4 SQL

Introduction to SQL: Data Definition Commands, Data Manipulation Commands, Select queries, Advanced Data Definition Commands, Advanced Select queries, Virtual Tables, Joining Database Tables.

Advanced SQL: Relational Set Operators, SQL Join Operators, Subqueries and correlated queries, SQL Functions, Oracle Sequences, and Procedural SQL.

Unit 5 Transaction Management and Concurrency Control

What is transaction, Concurrency control, Concurrency control with locking Methods, Concurrency control with time stamping methods, concurrency control with optimistic methods, database recovery management.

Practical

Credit -2

Database Management Systems Lab

1. Order Tracking Database

- The Order Tracking Database consists of the following defined six relation schemas.
- Employees(eno,ename,zip,hdate)
- Parts(pno,pname,qoh,price,level) (hint: qoh: quality on hand)
- Customers(cno,cname,street,zip,phone)
- Orders(ono,cno,eno,receiveddate,shipped date) Odetails(ono,pno,qty)
- Zipcodes(zip,city)

Solve the following:

1. Get all pairs of customer numbers for customers based on same zip code.
2. Get part numbers for parts that have been ordered by at least two different customers.
3. For each odetail row, get ono,pno,pname,qty and price values along with the total price for the item. (total price=price*qty)

4. Get customer name and employee pairs such that the customer with name has placed an order through the employee
5. Get customer names living in fort dodge or liberal.
6. Get cname values of customers who have ordered a product with pno 10506.
7. Get pname values of parts with the lowest price. 8. Get cname values of customers who have placed at least one order through the employee with number 1000.
8. Get the cities in which customers or employees are located.
9. Get the total sales in dollars on all orders.
10. Get part name values that cost more than the average cost of all parts.
11. Get part names of parts ordered by at least two different Customers.
12. Get for each part get pno, pname and total sales
13. For each part, get pno,pname, total sales, whose total sales exceeds 1000
14. Get pno, part names of parts ordered by at least two different customers.
15. Get cname values of customers who have ordered parts from any one employee based in wichita or liberal.

2. Shipment database

An enterprise wishes to maintain the details about his suppliers and other corresponding details.

For that it uses the following tables:

- Table s(sid,sname,address)
- primary key: sid
- Table p(pid,pname,color)
- primary key: pid
- Table cat(sid,pid,cost)
- primary key: sid+pid
- Suggested Reading key: sidSuggested Readings.sid
- pidSuggested Readingp.pid

Solve the following:

1. Find the pnames of parts for which there is some supplier
2. Find the snames of suppliers who supply every part.
3. Find the snames of suppliers who supply every red part.
4. Find the pnames of parts supplied by london supplier and by no one else
5. Find the sids of suppliers who charge more for some part other than the average cost of that part
6. Using group by with having clause get the part numbers for all the parts supplied by more than one supplier.
7. Get the names of the suppliers, who do not supply part p2.
8. Find the sids of suppliers who supply a red and a green part 9. Find the sids of suppliers who supply a red or a green part

9. Find the total amount has to pay for that supplier by part located from london Employee Database: An enterprise wishes to maintain a database to automate its operations. Enterprise divided into certain departments and each department consists of employees.

The following two tables:

- describes the automation schemas
- Dept (deptno, deptname, loc)

3. Emp (empno,ename,job,mgr,hiredate,sal,comm,deptno)

1. Create a view, which contain employee names and their manager names working in sales department.
2. Determine the names of employee, who earn more than their managers.
3. Determine the names of employees, who take highest salary in their departments.
4. Determine the employees, who located at the same place.
5. Determine the employees, whose total salary is like the minimum salary of any department.
6. Update the employee salary by 25%, whose experience is greater than 10 years.
7. Delete the employees, who completed 32 years of service.
8. Determine the minimum salary of an employee and his details, who join on the same date.
9. Determine the count of employees, who are taking commission and not taking Commission.
10. Determine the department does not contain any employees.
11. Find out the details of top 5 earner of company.
12. Display those managers name whose salary is more than average salary of his employees.
13. Display those employees who joined the company before 15th of the month?
14. Display the manager who is having maximum number of employees working under him?
15. Print a list of employees displaying 'less salary' if less than 1500 if exactly 1500 display as 'exact salary' and if greater than 1500 display 'more salary'?
16. Display those employees whose first 2 characters from hire date-last 2 characters of salary?
17. Display those employees whose 10% of salary is equal to the year of joining?
18. In which year did most people join the company? Display the year and number of employees.
19. Display the half of the enames in upper case and remaining lower case
20. Display ename, dname even if there no employees working in a particular department(useouter join).

4. Pl/sql programs

- Write a pl/sql program to check the given number is strong or not.
- Write a pl/sql program to check the given string is palindrome or not.
- Write a pl/sql program to swap two numbers without using third variable.
- Write a pl/sql program to generate multiplication tables for 2,4,6

- Write a pl/sql program to display sum of even numbers and sum of odd numbers in the given range.
- Write a pl/sql program to check the given number is pollinndrome or not.
- write a pl/sql procedure to prepare an electricity bill by using following table
table used: elect
name null? Type
mno not null number(3)
cname varchar2(20)
cur_read number(5)
prev_read number(5)
no_Units number(5)
amount number(8,2)
ser_tax number(8,2)
net_amt number(9,2)
- Write a procedure to update the salary of employee, who belongs to certain department with a certain percentage of raise.

DC01FSC-2C3 Environmental Studies

Credit - 2

Goal: This course will enable the students to understand and define terminology commonly used in environmental science; Briefly summarize and describe global, regional, and landscape scale environmental processes and systems; list common and adverse human impacts on biotic communities, soil, water, and air quality and suggest sustainable strategies to mitigate these impacts.

Objectives: By the end of this course, a student will

- Possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.
- Solve problems systematically, creatively, and reflexively, ready to assemble knowledge and formulate strategy.
- Read, critically evaluate presented information and data using scientific principles and concepts, synthesize popular media reports/articles discussing environmental issues, and verbally discuss and defend their Introduction to Environmental Science
- Apply learned information to postulated environmental scenarios to predict potential outcomes.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Introduction to environmental studies

1. Multidisciplinary nature of environmental studies;
2. Scope and importance; Concept of sustainability and sustainable development.

Unit 2 Ecosystems

- What is an ecosystem? Structure and function of ecosystem; Energy flow in an ecosystem: food chains, food webs and ecological succession. Case studies of the following ecosystems: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit 3 Natural Resources: Renewable and Non-renewable Resources

- Land resources and land use change; Land degradation, soil erosion and desertification.
- Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations.
- Water: Use and over-exploitation of surface and ground water, floods, droughts, conflicts over water (international & inter-state).

- Energy resources: Renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs, case studies.

Unit 4 Biodiversity and Conservation

- Levels of biological diversity: genetic, species and ecosystem diversity; Biogeographic zones of India; Biodiversity patterns and global biodiversity hot spots
- India as a mega-biodiversity nation; Endangered and endemic species of India
- Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions; Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.
- Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value.

Unit 5 Environmental Pollution

- Environmental pollution: types, causes, effects and controls; Air, water, soil and noise pollution
- Nuclear hazards and human health risks
- Solid waste management: Control measures of urban and industrial waste.
- Pollution case studies.

Unit 6 Environmental Policies & Practices

- Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture
- Environment Laws: Environment Protection Act; Air (Prevention & Control of Pollution) Act; Water (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest Conservation Act. International agreements: Montreal and Kyoto protocols and Convention on Biological Diversity (CBD).
- Nature reserves, tribal populations and rights, and human wildlife conflicts in Indian context.

Unit 7: Human Communities and the Environment

- Human population growth: Impacts on environment, human health and welfare.
- Resettlement and rehabilitation of project affected persons; case studies.
- Disaster management: floods, earthquake, cyclones and landslides.
- Environmental movements: Chipko, Silent valley, Bishnois of Rajasthan.
- Environmental ethics: Role of Indian and other religions and cultures in environmental conservation.

- Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi).

Unit 8 Field work

- Visit to an area to document environmental assets: river/ forest/ flora/fauna, etc.
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds and basic principles of identification.
- Study of simple ecosystems -pond, river, Delhi Ridge, etc.

DC01FSC-2C4 Criminalistics

Credits: 4

Goals: to apply the principles of sciences to the examination of evidence in order to help the justice system determine that a crime has been committed, to identify its victim(s) and perpetrators, and finally, determine the modus operandi, or method of operation.

Objectives: After studying this paper the students will know –

- The methods of securing, searching and documenting crime scenes.
- The art of collecting, packaging and preserving different types of physical and trace evidence at crime scenes.
- The legal importance of chain of custody.
- The tools and techniques for analysis of different types of crime scene evidence.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Reports on published research studies, Library research on topics. Written book reports by students, Interviews, Audio-tutorial lessons, Open textbook study, Committee projects--small groups, Individual projects Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Crime Scene Management

Types of crime scenes – indoor and outdoor. Securing and isolating the crime scene.

Crime scene search methods. Safety measures at crime scenes. Legal considerations at crime scenes. Documentation of crime scenes – photography, videography, sketching and recording notes. Duties of first responders at crime scenes. Coordination between police personnel and forensic scientists at crime scenes. The evaluation of 5Ws (who?, what?, when?, where?, why?) and 1H (how?). Crime scene logs.

Unit 2 Crime Scene Evidence

Classification of crime scene evidence – physical and trace evidence. Locard principle.

Collection, labeling, sealing of evidence. Hazardous evidence. Preservation of evidence. Chain of custody. Reconstruction of crime scene.

Unit 3 Forensic Physics

Glass evidence – collection, packaging, analysis. Matching of glass samples by mechanical fit and refractive index measurements. Analysis by spectroscopic methods. Fracture analysis and direction of impact.

Paint evidence – collection, packaging and preservation. Analysis by destructive and non-destructive methods. Importance of paint evidence in hit and run cases.

Fibre evidence – artificial and man-made fibres. Collection of fibre evidence. Identification and comparison of fibres.

Soil evidence – importance, location, collection and comparison of soil samples.

Cloth evidence – importance, collection, analysis of adhering material. Matching of pieces. Toolmark evidence. Classification of toolmarks. Forensic importance of toolmarks. Collection, preservation and matching of toolmarks. Restoration of erased serial numbers and engraved marks. Forensic gemmology.

Practicals

Credits: 2

1. To prepare a report on evaluation of crime scene.
2. To reconstruct a crime scene (outdoor and indoor).
3. To compare soil samples by density gradient method.
4. To compare paint samples by physical matching method.
5. To compare paint samples by thin layer chromatography method.
6. To compare glass samples by refractive index method.
7. To identify and compare tool marks.
8. To compare cloth samples by physical matching

Open Elective 1

DC01FSC-2OE1

Trace evidences in crime scene investigation

Credit 2

Goals: Students will learn about the traces of evidence in the crime scene investigation.

Objectives: Learning Objectives: After studying this paper the students will know –

- Different laboratories
- The fundamental principles on which the science of fingerprinting is based.
- Fingerprints are the most infallible means of identification.
- The physical and chemical techniques of developing fingerprints on crime scene evidence.
- The significance of foot prints, Ballistics,

Teaching Learning methods

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Introduction to Forensic Science:

- a) Meaning, definition and principles
- b) Role of forensic science in crime detection
- c) Forensic Science Lab., different branches & their functions

Unit 2

Finger Print: Meaning, Importance and History, Patterns and Classification of Finger Prints, Development of fingerprints, Analysis of fingerprints, Sequential Treatment and Enhancement., Photography of fingerprints, Digital Transmission

Unit 3

Forensic Ballistics: Classification of Fire-Arms. Ammunition- Cartridge and their Components Identification, Collection and Preservation of Ballistic Evidences found in a Crime Scene Analysis of Suicidal, Homicidal and Accidental Shoot out cases

Unit-4

Foot Print/Shoe Print in crime detection., Types of Foot Print, Preservation, Recording and Evidentiary Value of Foot Print, Walking Picture/Gait Pattern

Suggested Readings

DC01FSC-2OE2
Questioned Document Analysis

Credit 2

Goals: The examination's primary purpose is to provide evidence about suspicious or questioned documents using a variety of scientific principles and methods.

Objectives:

- Analysis of documents and handwritings
- Identifications of forgeries
- Analysis of computer prints

Teaching Learning methods

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Questioned Document: Nature, Development and Importance. Classification of Questioned documents, Photography of Handwriting and signatures for forensic analysis. Forgery- and its types.

Unit 2

Handwriting and Signature: Characteristics, Basis of Identification, Variations and Factors affecting Writing, Comparison of Handwriting/ Signature, Disguise Writing: Meaning, Characteristics and Recognition

Unit 3

Type Written/ Computer Print Identification, Stylothesis and Anonymous writing, Difference between Graphologists and a Questioned Document expert. Examination and analysis of questioned documents, Currency Note examination: Identifying features of fake and genuine Indian currency notes.

DC01FSC-2OE3

Police Administration and Crime Investigative Agencies

Credit 2

Goal: The purpose of this course is to study various problems of Police Administration.

Objectives:

- Functions of police organizations
- Functions of Different agencies
- Organizations of State and Indian police

Teaching Learning methods

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

History Police Administration, Indian Police Service, Rank of Police, Officers–Badges, Role & Functions of Police, Institute of forensic Science (NICFS), Sardar Vallabhbhai Patel National Police Academy (NPA).

Unit 2

Bureau of Police Research and Development (BPR&D), Central Bureau of Investigation (CBI), National Crime Records Bureau (NCRB), Police training centers and functions

Unit 3

State Level Police Organization: Criminal Investigation Department (CID), Modus Operandi Bureau (MOB), District level police, Structure of an Indian Police Station.

Unit 4

International Investigative Agencies: Federal Bureau of Investigation (FBI), Central Investigation Agency (CIA), Enforcement Directorate(ED), Directorate General for External Security (DGSE),

Semester III
DC01FSC-3C1

Introduction to Cyber Forensics & Cyber Laws

Credit 4

Goal: This course will enable the students to gain in-depth knowledge in the field of Computer forensics & Cyber Crime. The students will be able to learn investigation tools and techniques, analysis of data to identify evidence, Technical Aspects & Legal Aspects related to cybercrime.

Objectives: By the end of this course, a student will

- The student will be able to demonstrate foundational knowledge and skills in forensics
- Describe the origin of computer forensics and the relationship between law enforcement and industry.
- Describe electronic evidence and the computing investigation process.
- To recognize the developing trends in Cyber law and the legislation impacting cyberspace in the current situation.
- To generate better awareness to battle the latest kinds of cybercrimes impacting all investors in the digital and mobile network.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Introduction to Cyber forensics: Information Security Investigations, Corporate Cyber Forensics, Scientific method in forensic analysis, investigating large scale Data breach cases. Analyzing malicious software. Types of Computer Forensics Technology, Types of Military Computer Forensic Technology, Types of Law Enforcement: Computer Forensic Technology, Types of Business Computer Forensic Technology, Specialized Forensics Techniques, Hidden Data and How to Find It, Spyware and Adware, Encryption Methods and Vulnerabilities, Protecting Data from Being Compromised Internet Tracing Methods, Security and Wireless Technologies, Avoiding Pitfalls with Firewalls Biometric Security Systems

Unit 2

Types of Computer Forensics Systems: Internet Security Systems, Intrusion Detection Systems, Firewall Security Systems, Storage Area Network Security Systems, Network Disaster Recovery Systems, Public Key Infrastructure Systems, Wireless Network Security Systems, Satellite Encryption Security Systems, Instant Messaging (IM) Security Systems, Net Privacy Systems, Identity Management Security Systems, Identity Theft, Biometric Security Systems, Router

Forensics. Cyber forensics tools and case studies. Ethical Hacking: Essential Terminology, Windows Hacking, Malware, Scanning, Cracking.

Unit 3

Evidence Collection and Data Seizure: Why Collect Evidence, Collection Options Obstacles, Types of Evidence, The Rules of Evidence, Volatile Evidence, General Procedure, Collection and Archiving, Methods of Collection, Controlling Contamination: The Chain of Custody, Reconstructing the Attack, The digital crime scene, Investigating Cybercrime, Investigating Web attacks, Investigating network Traffic ,Identification of Data: Timekeeping, Forensic Identification and Analysis of Technical Surveillance Devices, Reconstructing Past Events.

Unit 4

Basic of law, understanding cyber space, Defining cyber law, Scope and jurisprudence, Concept of jurisprudence, Overview of Indian legal system, Introduction to IT Act 2000, Amendment in IT Act.

Unit 5

Cyber Crimes – Types of cyber-crimes –against individual’s institution, and states-various offenses and punishments, digital signature-concepts of public key and private key, certification authorities and their role, creation and authentication of digital signature. E-contracting –salient features of E-contracts, formation of E-contracts and types, E-governance, E-governance models, E-commerce- salient features and advantages.

DC01FSC-3C2 Data Structure

Credit 4

Goal: The Goal for this course are to gain a solid understanding of the topics such as Principles for good program design, especially the uses of data abstraction and modular program composition. The fundamental design, analysis, and implementation of basic data structures and algorithms. Basic concepts in the specification and analysis of programs.

Objectives: By the end of this course, a student will

- Differentiate primitive and non-primitive structures.
- Design and apply appropriate data structures for solving computing problems.
- Apply sorting and searching algorithms to the small and large data sets.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Data Structures Basics

Structure and Problem Solving, Data structures, Data structure Operations, Algorithm: complexity, Time- space trade-off.

Unit 2 Linked List

Introduction, Linked lists, Representation of linked lists in Memory, Traversing a linked list, Searching a linked list, Memory allocation and Garbage collection, insertion into linked list, Deletion from a linked list, Types of linked list.

Unit 3 Stack and Queue

Introduction, Array Representation of Stack, Linked List Representation of stack, Application of stack, Queue, Array Representation of Queue, Linked List Representation of Queue.

Unit 4 Trees

Definitions and Concepts, Operations on Binary Trees, Representation of binary tree, Conversion of General Trees to Binary Trees, Sequential and Other Representations of Trees, Tree Traversal.

Unit 5 Graphs

Matrix Representation of Graphs, List Structures, Other Representations of Graphs, Breadth First Search, Depth First Search, Spanning Trees.

Unit 6 Directed Graphs

Types of Directed Graphs; Binary Relation As a Digraph; Euler's Digraphs; Matrix Representation of Digraphs.

Unit 7 Applications of Graphs

Topological Sorting, Shortest-Path Algorithms – Weighted Shortest Paths – Dijkstra’s Algorithm, Minimum spanning tree- Prim’s Algorithm, Introduction to NP-Completeness.

Unit 8 Searching and Sorting Techniques

Sorting Techniques: Bubble sort, Merge sort, Selection sort’, Heap sort, Insertion Sort. Searching Techniques: Sequential Searching, Binary Searching, Search Trees.

Unit 9 Elementary Algorithms

Notation for Expressing Algorithms; Role and Notation for Comments; Example of an Algorithm; Problems and Instances; Characteristics of an Algorithm; Building Blocks of Algorithms; Procedure and Recursion – Procedure, Recursion; Outline of Algorithms; Specification Methods for Algorithms.

Unit 10 Mathematical Functions and Notations

Functions and Notations; Modular Arithmetic / Mod Function; Mathematical Expectation in Average Case Analysis; Efficiency of an Algorithm; Well Known Asymptotic Functions and Notations; Analysis of Algorithms – Simple Examples; Well Known Sorting Algorithms – Insertion sort, Bubble sort, Selection sort, Shell sort, Heap sort.

Unit 11 Divide and Conquer

Divide and Conquer Strategy; Binary Search; Max. And Min.; Merge sort; Quick sort.

Unit 12 Greedy Method

Greedy Method Strategy; Optimistic Storage on Tapes; Knapsack Problem; Job Sequencing with Deadlines; Optimal Merge Pattern; Single Source Shortlist Paths.

Unit 13 Dynamic Programming

Dynamic Programming Strategy; Multistage Graphs; All Pair Shortest Paths; Travelling Salesman Problems.

Unit 14 Backtracking Strategy

8-Queens Problem, Sum of Subsets, Knapsack Problem.

DC01FSC-3C3 Operating System

Credit 4

Goal: This course will enable the students to demonstrate skills in tracing, analyzing, and designing recursive algorithms and recursive methods; to explain programs that use scapegoat trees and also programs that use red–black trees; to analyze and implement different types of sorting algorithms.

Objectives: By the end of this course, a student will

- Write programs using array-based lists; linked lists; skip lists; using binary trees and variations.
- Write code for hash tables, and compare and contrast various collision detection and avoidance techniques.
- Apply heaps to implement priority queues
- Implement data structures for graphs and approaches for searching graphs using breadth-first, depth-first, best-first search, etc.
- Analyze binary tree.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Operating System

Unit 1 Introduction

Batch Systems, Concepts of Multiprogramming and Time Sharing, Parallel, Distributed and real time Systems, Operating System Structures, Components & Services, System calls, System programs, Virtual machines. Process Management: Process Concept, Process Scheduling, Co – Operating process, Threads, Inter process communication, CPU Scheduling Criteria, Scheduling algorithm, Multiple Processor Scheduling, Real time Scheduling, Algorithm evolution.

Unit 2 Process Synchronization and deadlocks

The Critical Section Problem, Synchronization hardware, Semaphores, Classical problems of synchronization, Critical regions, monitors, Dead locks – system model, Characterization, Dead lock prevention, avoidance and detection, Recovery from dead lock, Combined approach to deadlock handling.

Unit 3 Memory Management

Logical and Physical address space, Swapping, Contiguous allocation, Paging, Segmentation, Segmentation with paging in Mastics and Intel 386, Virtual Memory-Demand paging and its

performance, Page replacement algorithms, Allocation of frames, thrashing, page size and other considerations. Demand Segmentation.

Unit 4 File management (Systems, Secondary Storage Structure

File Concepts, Access methods, Directory Structure, Protection and consistency, File system structure, Allocation methods, Free space management, Directory Implementation, Efficiency and Performance, Recovery. Disk Management (Structure, Disk Scheduling Methods): Disk Structure & Scheduling methods, Disk management, Swap – Space management.

Unit 5 Protection and Security

Goal of protection, Domain Protection, Access matrix, Security Problem, Authentication, One-time password, program threats, System threads. Case Study of Windows and Linux Operating System.

Suggested Reading

Practical:

Credit 2

PART-A

DATA STRUCTURES

1. Write a program to demonstrate binary search.
2. Write a program to demonstrate selection sort.
3. Write a program to demonstrate insertion sort.
4. Write a program to demonstrate merge sort.
5. Write a program to implement stack using array.
6. Write a program to implement queue using arrays.

PART-B

OPERATING SYSTEM

1. Write a shell script to accept 'n' integers and count +ves, -ves and zeroes respectively. Also find the sum of +ves and -ves.
2. Write a shell script to accept many characters and count individual vowels, digits, spaces, special characters and consonants.
3. Write a shell script to accept student name and marks in 3 subjects through command line arguments. Find the total marks and grade (depending on the total marks).
4. Write a menu driven shell script for the following
 - a) Rename a file (check for the existence of the source file).
 - b) Display the current working directory.
 - c) List the users logged in.
5. Write a shell script to accept many filenames through command line. Do the following for each filename
 - a) If it is an ordinary file, display its content and also check whether it has execute permission.
 - b) If it is a directory, display the number of files in it.
 - c) If the file/directory does not exist, display a message.
6. Write a menu driven shell script for the following
 - a) Append the contents of a file to another file (Display the message if the file does not exist in the directory).
 - b) List all file names/ directory names in the present working directory which has the specified pattern.
 - c) Assign execute permission to a specified file for the owner and a group.

PART-C

DATA STRUCTURES

Write a program to evaluate postfix expression.

Write a program to implement circular queue using array.

Write a program to perform all operations on a singly linked list.

Write a program to implement stack using linked list.

Write a program to implement queue using linked list.

Write a program to perform inorder, preorder and post order traversal of a binary tree.

DC01FSC-3C4 Research Methodology

Credit 2

Goal: This course will enable the students to accumulate knowledge which are essential for gathering, analyzing and interpretation of the problems confronted by humanity; to understand the concepts relating to research, basic statistics and business; to study the nature of Social and Business research, and provides the techniques of research, identification of problem, research design, data collection, sampling, hypothesis, processing, and interpretation of data and preparation of reports.

Objectives: By the end of this course, a student will

- Provide an overview of the research process
- Define the methods and techniques of research
- State clearly their research problem and associated research questions arising, including both descriptive and either explanatory or exploratory questions.
- Conduct a literature review of the concepts comprising the research questions
- Set out the main elements of a potential research instrument for testing the hypotheses,
- Distinguish between quantitative and qualitative approaches and methods
- Designing research report

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Nature of Social and Business Research

Meaning and definition of research, Criteria of good research, social Research-Goal,assumptions, deductive and inductive methods, significance and difficulties of Social research. Business research- Research and business decisions.

Unit 2

Methods and Techniques of Research.

Classification of research -According to the intent- Pure Research, Applied Research, Exploratory Research, Descriptive Study, Diagnostic Study, Evaluation Studies, and Action Research. According to the method- Experimental Research, Analytical Study, and Historical Research. Inter Disciplinary Research and its essentials.

Unit 3

Research Problem and Research Design.

Research Problem: Steps involved for selection of a topic for research study, components of research problem, Definition of Problem, Evaluation of Problem, review of relevant literature, sources of literature Note Taking. Testing of Hypothesis, Errors in Hypothesis, Research Design: - Meaning, definition, Classification of Research Designs. Importance of Research Plan, Contents of a Research Plan.

Unit 4

Sampling and Sample Design

Meaning of Sample, purpose of Sampling, Sampling Technique – Random Sampling and Non-random sampling, Errors in Sample Surveys – Sampling Errors and Non Sampling Errors.

Unit 5

Methods and Tools for Data collection.

Methods of Data Collection: Meaning and Importance of data, Sources of data – Primary Sources and Secondary Sources, Methods of collection of Primary and Secondary data. Tools or instruments of data collection: Observation schedule, Interview guide, Interview schedule, mailed questionnaire, Rating scale, Check list, Opinionated, Document Schedule. Types of Questions– open ended/close ended, Measurement scale–Meaning and types

Unit 6

Processing, Analysis and Interpretations of Data and Report writing.

Steps in data processing, editing, coding, classification, transcription, analysis of data, interpretation. Use of Excel in Data Entry & Analysis- Variable types- Frequency tables – Various Kinds of Charts and Diagrams Used and their Significance.

Report Writing: Introduction, types of report, planning of report-writing, format of research report. Documentation: Foot notes and Bibliography, briefing and evaluation of report-writing.

Suggested Reading

2. Bhandarkar, P. L. (2010). Methodology and techniques of social research. Himalaya Publishing House.
3. Kothari, R. (2004). Research methodology: methods and techniques. New Age International.
4. Panneerselvam. R., (2014). Research methodology. Phi Learning.
5. Trochim, M.K. (2009). Research Methods. New Delhi: Sultan Chand.

DC01FSC-3C5
Forensic Dermatoglyphics

Credits: 4

Goals: Provide Knowledge about the Principles behind science of Fingerprint, Basic knowledge about types and patterns of Fingerprints and its classification, different physical and chemical methods used to develop fingerprint on various evidences in crime scene, classifying criminal record by fingerprints and worked carried out in India, Fingerprint recording bureau, and its establishment, other impressions evidences such as lip prints, foot prints etc its classification and significance

Objectives: After studying this paper the students will know –

- The fundamental principles on which the science of fingerprinting is based.
- The physical and chemical techniques of developing fingerprints on crime scene evidence.
- Fingerprints and how Fingerprint helps in identification of criminal.
- How criminal records are maintained.
- The significance of foot, palm, ear and lip prints.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Reports on published research studies, Library research on topics. Written book reports by students, Interviews, Audio-tutorial lessons, Open textbook study, Committee projects--small groups, Individual projects Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Basics of Fingerprinting

Introduction and history, with special reference to India.

Biological basis of fingerprints. Formation of ridges. Fundamental principles of fingerprinting. Types of fingerprints. Fingerprint patterns. Fingerprint characters/minutiae.

Plain and rolled fingerprints.

Classification and cataloguing of fingerprint record. Automated Fingerprint Identification System.

Significance of poroscopy and edgeoscopy.

Unit 2 Development of Fingerprints

Latent prints. Constituents of sweat residue.

Latent fingerprints' detection by physical and chemical techniques.

Mechanism of detection of fingerprints by different developing reagents. Application of light sources in fingerprint detection.

Preservation of developed fingerprints.

Digital imaging for fingerprint enhancement.

Fingerprinting the deceased. Developing fingerprints on gloves.

Unit 3 Other Impressions

Importance of footprints. Casting of foot prints, Electrostatic lifting of latent foot prints.

Palm prints.

Lip prints - Nature, location, collection and examination of lip prints. Ear prints and their significance.

Palm prints and their historical importance.

Practicals

Credits: 2

1. To record plain and rolled fingerprints.
2. To carry out ten digit classification of fingerprints.
3. To identify different fingerprint patterns.
4. To identify core and delta.
5. To carry out ridge tracing and ridge counting.
6. To investigate physical methods of fingerprint detection.
7. To investigate chemical methods of fingerprint detection.
8. To use different light sources for enhancing developed fingerprints.
9. To prepare cast of foot prints.

4. Lee, H. C., & Gaensslen, R. E. (2001). *Advances in fingerprint technology*. Crc Press.

Semester IV
DC01FSC-4C1
Mobile Forensics

Credit 4

Goals: This course is designed as an advanced course in computer forensics focusing on mobile devices and other devices not classifiable as laptops, desktops, or servers.

Objectives: students will:

- Understand what data is able to be acquire from mobile devices and be able to acquire and investigate data from mobile devices using forensically sound and industry standard tools
- Understand the relationship between mobile and desktop devices in relationship to a criminal and corporate investigations
- Be able to analyze mobile devices, their backup files, and artifacts for forensic evidence.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Reports on published research studies, Library research on topics. Written book reports by students, Interviews, Audio-tutorial lessons, Open textbook study, Committee projects--small groups, Individual projects Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Android and mobile forensics: Introduction, Android platform, Linux, Open source software and forensics, Android Open Source Project, Internationalization, Android Market, Android forensics

Unit 2

Android hardware platforms: Overview of core components, Overview of different device types, Read-only memory and boot loaders, Manufacturers, Specific devices

Unit 3

Android software development

Android software development kit and android debug bridge: Android platforms, Software development kit (SDK), Android security model, Forensics and the SDK.

Unit 4

Android file systems and data structures: Data in the shell, Type of memory, File systems, Mounted file systems and directory structures. Android forensic techniques: Procedures for handling an Android device, Imaging Android USB mass storage devices, Logical techniques, Physical techniques

Unit 5

Android device data and app security: Data theft targets and attack vectors, Security considerations, Individual security strategies, Corporate security strategies, App development security strategies. Android application and forensic analysis: Analysis techniques, FAT forensic analysis, forensic analysis, Android app analysis

Text Book

DC01FSC-4C2
Biometric Security

Credit 4

Goal: This course will familiarize the students with the systematic approaches to biometric security. The student shall be able to identify and resolve issues related to biometric securities such as fingerprint, retina, and DNA biometric

Objectives: By the end of this course, a student will

- Understand and analyse biometric systems at the component level
- Analyse and design basic biometric system applications
- Identify the sociological and acceptance issues associated with the design and implementation of biometric systems.
- Understand various Biometric security issues

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Biometric fundamentals and standards: Definition, Biometrics versus traditional techniques, Characteristics, Key biometric processes: Verification - Identification - Biometric matching, Performance measures in biometric systems, assessing the privacy risks of biometrics - Designing privacy sympathetic biometric systems, Different biometric standards, and Application properties.

Unit 2

Physiological Biometric Technologies: Fingerprints, Technical description, characteristics, Competing technologies, strengths, weaknesses, deployment, Facial scan, Technical description, characteristics, weaknesses-deployment, Iris scan, Technical description, characteristics, strengths, weaknesses, deployment

Unit 3

Retina vascular pattern, Technical description, characteristics, strengths, weaknesses, Deployment, Hand scan, Technical description, characteristics, strengths, weaknesses deployment, DNA biometrics. Behavioural Biometric Technologies: Handprint Biometrics, DNA Biometrics.

Unit 4

Signature and handwriting technology, Technical description, classification, keyboard /keystroke dynamics, Voice, data acquisition, feature extraction, characteristics, strengths, weaknesses, deployment.

Unit 5

Multi biometrics and multi factor biometrics, two-factor authentication with passwords, tickets and tokens, executive decision, implementation plan.

Suggested Reading.

Practicals

Credit 2

Practical's related to biometric security using some of the well-known open source software's,

- OpenBR
- Flandmark
- OpenFaceTracker
- OpenEBTS
- DeepFace
- FacePlus

With the help of these software's we can analyse the characteristics of facial images. For fingerprint analysis software's

- Soter
- Biometricauthentication
- Reprint
- Zklibrary

DC01FSC-4C3

Programming in Java

Credit 4

Goal: This course will enable the students to familiarize with hands-on course, students will gain extensive experience with Java and its object-oriented features. Students will learn to create robust console and GUI applications and store and retrieve data from relational databases.

Objectives: By the end of this course, a student will

- Write, compile and execute Java programs
- Build robust applications using Java's object-oriented features
- Create robust applications using Java class libraries
- Develop platform-independent GUIs
- Read and write data using Java streams
- Retrieve data from a relational database with JDBC.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Introduction to Java

Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords DataTypes, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods)

Unit 2 Arrays, Strings and I/O

Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings to & From Methods, String Buffer Classes. Simple I/O using System. Out and the Scanner class, Byte and Character streams, Reading/Writing from console and files.

Unit 3 Object-Oriented Programming Overview

Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Unit 4 Inheritance, Interfaces, Packages, Enumerations, Auto boxing and Metadata

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

Unit 5 Exception Handling, Threading, Networking and Database Connectivity

Exception types, uncaught exceptions, throw, built-in exceptions, creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

Unit 6 Applets and Event Handling

Java Applets: Introduction to Applets, Writing Java Applets, working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, text fields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Suggested Reading

- Daniel Liang. Y., (2016). Introduction to Java programming. Pearson.
- Hubbard, J. R., (2001). Programming with Java. Mcgraw-Hill.

Practical

Students are advised to do laboratory/practical practice not limited to, but including the following types of problems:

Credit 2

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer class like setCharAt (setLength(), append(), insert(), concat()and equals()).
9. Write a program to create a `Distance` class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer.
10. Modify the `Distance` class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as Suggested Reading variable to another object Suggested Reading variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions (from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by Suggested Reading and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program `Divide By Zero` that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.

22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URL Connection using the open Connection() method and then use it examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applets window.
26. Write a program to get the URL/location of code (i.e. java code) and document (i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

DC01FSC-4C4
Introduction to Biometry

Credits: 2

Goals: The development and applications of **biometric** systems is to find characteristics that are stable and distinctive given the likelihood of encounters.

Objectives: After studying this paper the students will know –

1. The basis of biometry.
2. The classification of biometric processes.
3. The importance of behavioral biometry.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Reports on published research studies, Library research on topics. Written book reports by students, Interviews, Audio-tutorial lessons, Open textbook study, Committee projects--small groups, Individual projects Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Fundamental Aspects

Definition, characteristics and operation of biometric system. Classification of biometric systems – physiological and behavioral. Strength and weakness of physiological and behavioral biometrics. Multimodal biometrics. Key biometric processes – enrollment, identification and verification. Positive and negative identification. Performance measures used in biometric systems – FAR, FRR, GAR, FTA, FTE and ATV. Biometric versus traditional technologies.

Unit 2 Physiological Biometrics

Fingerprints, palm prints, iris, retina, geometry of hand and face.

Unit 3 Behavioral Biometrics

Handwriting, signatures, keystrokes, gait and voice.

Suggested Readings

1. S. Nanavati, M. Thieme and R. Nanavati, (2002), *Biometrics*, Wiley India Pvt. Ltd.
2. P. Reid, (2004), *Biometrics for Network Security*, New Delhi
3. J.R. Vacca, (2007), *Biometric Technologies and Verification Systems*, Butterworth-Heinemann, Oxford

Open Elective II

DC01FSC-4OE1

Forensic Photography and Voice Analysis

Credit 2

Goals: To capture evidences that is admissible in court.

Objective:

- Learn how to take photography
- Types of photography used in forensic science

Teaching Learning Methodology

- Instructional methods and teaching methodology will be diverse and have a combination of lectures, active problem solving, demonstrations, group discussions.
- The exhaustive list of methodologies is listed in point no.7. The instructor would provide a scheme of work that details specific teaching and learning strategies for each unit of the course

Unit 1

Forensic Photography: Basics: Definition of photography, Basic principles and techniques, Applications of photography in forensic science

Unit 2

Types of Photography, Procedures of taking photography, Tools and techniques used in photography

Unit 3

Crime scene and laboratory photography, Basic concepts of videography/high speed videography
Digital photography and 3D photography, Photoshop development, super imposition techniques

Unit 4

Forensic Voice analysis, Voice Print Identification, Tape Tampering Examination, ASR, Forensic Linguistics, Forensic Video Authentication

Suggested Reading:

- Jauhari B.C. & Gaur S.N. (Revised 2008) – Firearms : Forensic Ballistics, Forensic Chemistry and Criminal Jurisprudence, Delhi Law House, New Delhi – 54 (India)
- Nabar B.S, (2018), Forensic Science in Crime Investigation, Asia Law House, Hyderabad.
- Ratan Deepak & Zaidi Mohd. Hasan (2008) – Forensic Science in India and the World, Alia Law Agency, Alahabad-211 001.
- Saferstein Richard – (1978) Criminalistics: Introduction to Forensic Science, Prentice Hall of India Private Ltd., New Delhi.

DC01FSC-4OE2
Security and Vigilance in Justice System

Credit 2

Goals: The primary goals of the criminal justice system are: accurate identification of the person responsible, fair adjudication, retribution, deterrence, rehabilitation and restoration.

Objectives: Five objectives are widely accepted for enforcement of the criminal law by punishments: retribution, deterrence, incapacitation, rehabilitation and restoration. Jurisdictions differ on the value to be placed on each. Retribution – Criminals ought to Be Punished in some way. This is the most widely seen goal.

Teaching Learning Methodology

- Instructional methods and teaching methodology will be diverse and have a combination of lectures, active problem solving, demonstrations, group discussions.
- The exhaustive list of methodologies is listed in point no.7. The instructor would provide a scheme of work that details specific teaching and learning strategies for each unit of the course

Unit 1

Concepts, definitions and importance of security system. Governmental and non-governmental security agencies their purposes, functions, Vigilance in public and private sector institutions; The Central Vigilance Commission Act, 2003

Unit 2

Frauds: Nature, Types and Modus Operandi of Frauds, Extent of Frauds in Banks, Insurance and Financial Institutions, Legal issues and Techniques of Combating above Frauds

Unit 3

Air Hijacking-Prevention and Detection. Security at Airport and Security Equipment, coastal security, Security at multi- national companies, Functions of Fraud analyst/ fraud investigation units

Unit 4

Stock and Share Related Crimes: Hurdles in the Investigation of Stock Crimes, White Collar Crime & Crimes about Tax Evasion, procedure to analysis CCTV footages, secret cameras

Suggested Reading

- Central Vigilance Commission Act, 2003 along with Related Acts
- Money – Laundering Act 2002.
- National Security Act, 1980
- National Security Guard Act, 1986
- Official Secrets Act, 1923
- Police Acts (Containing 6 Acts)
- Private Security Agencies (Regulation) Act 2005 along with Rules, 2006

- Securitization and Reconstruction of Financial Assets and enforcement of Security Interest Act, 2002 and Security Interest (Enforcement) Rules, 2002
- Sharma B. R (2008) - Bank Frauds; Prevention & Detection (3rd edition), Universal Law Publishing Co., New Delhi.

DC01FSC-4OE3
Economic offences

Credits: 2

Goals: Economics of crime deals with the effect of incentives on criminal behaviour and the possible measures to reduce crime. Economic models not only predict and explain the behaviour of criminals, but can also be used to describe the causes of crime and the dynamic interaction between criminals and anti-crime measures.

Objectives:

1. To make inventory of and describe various economic offences.
2. To ascertain the incidence and magnitude of economic offences; also to ascertain the incidence of reporting of Economic Offences to enforcement agencies by the victims

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Reports on published research studies, Library research on topics. Written book reports by students, Interviews, Audio-tutorial lessons , Open textbook study ,Committee projects--small groups ,Individual projects Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Taxonomy of Economic Offences/Criminogenic Factors

Fundamentals of economics in economic offences. Tax evasion. Excise duty evasion. Fraudulent bankruptcy. White collar crime. Economic exclusion. Black money. Corruption and bribery of public servants. Money laundering and hawala transactions. Insurance frauds. Corporate frauds. Bank frauds. Ponzi scheme. Pyramid scheme. Illicit trafficking in contraband goods. Illicit trafficking in arms. Illicit trafficking in explosives. Illicit drug trafficking. Trafficking in human organs. Cultural objects trafficking. Racketeering in employment. Racketeering in false travel documents.

Unit 2

Prevention of Economic Offences

Legislations to deal with different forms of economic offences. RBI Act. SEBI Act. Competition Commission of India Act. Credit card frauds. Enforcement agencies to deal with different forms of economic offences. International perspectives – measures adopted by FBI and INTERPOL. Case histories of economic offences.

Unit 3

Legal recognition of Economic Crimes

Relevant Section related to Economic Crimes: Intellectual property crime, Corruption and bribery of public servants. Money laundering and hawala transactions. Insurance frauds. Corporate frauds. Bank frauds. Illicit trafficking in contraband goods.

Suggested Readings

1. R.V. Clarke, (1997), Situational Crime Prevention: Successful Case Studies, Criminal Justice Press, New York, 2nd Edition
2. S.P. Green, (2006), Lying, Cheating and Stealing: A Moral Theory of White Collar Crime, Oxford University Press, Oxford
3. G. Geis, R. Meier, L. Salinger (Eds.), (1995), White-Collar Crime: Classic & Contemporary Views, Free Press, New York
4. J. Reiman, (1998), The Rich get Richer and the Poor get Prison, Allyn & Bacon, Boston
5. Indian Audit and Accounts department, Audit of Fraud, Fraud Detection and Forensic Audit, 2007.
6. State Crime Branch, Haryana, Investigation of Economic Offences.

Semester V
DC01FSC-5C1
Preserving & Recovering Digital Evidence

Credit 4

Goal: This course will familiarize the students to learn to analyze different laws related to computer crime, how to Secure Digital Evidences, to understand the Investigation.

Objectives:

- It helps to recover, analyze, and preserve computer and related materials in such a manner that it helps the investigation agency to present them as evidence in a court of law.
- It helps to postulate the motive behind the crime and identity of the main culprit.
- Designing procedures at a suspected crime scene which helps you to ensure that the digital evidence obtained is not corrupted.
- Data acquisition and duplication: Recovering deleted files and deleted partitions from digital media to extract the evidence and validate them.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Digital Investigation: Digital evidence and computer crime, history and terminals of computer crime investigation, technology and law, the investigate process, investigate reconstruction, modus operandi, motive and technology, digital evidence in the court room.

Unit 2

Computer basics for digital investigators: applying forensic science to computers, forensic examination of windows systems, forensic examination of unix systems, forensic examination of macintosh systems, forensic examination of handheld devices.

Unit 3

Networks: Networks basics for digital investigators, applying forensic science to networks, digital evidence on physical and datalink layers, digital evidence on network and transport layers, digital evidence on the internet.

Unit 4

Investigating Computer Crime: Investigating computer intrusions, investigating cyberstalking, digital evidence as alibi.

Unit 5

Guidelines: Handling the digital crime scene – digital evidence examination guidelines.

Suggested Reading:

- Casey, E. (2011). Digital evidence and computer crime : forensic science, computers and the Internet. Academic Press.
- Scheindlin, S. (2016). Electronic Discovery and Digital Evidence in a Nutshell. West Academic.

Mobile & Wireless Security

Credit 4

Goal: This course will familiarize the students to learn to analyze different types of mobile and wireless security and how to implement using various tools.

Objectives:

- The course will provide knowledge of information security technology and methods for communication systems that provide services for mobile users by wireless access networks.
- Knowledge and understanding of security mechanisms and protocols in wireless communication networks.
- Knowledge about some of the models, design principles, mechanisms and solutions used in wireless network security to obtain authentication and key transport protocols.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Wireless Fundamentals: Wireless Hardware, Wireless Network Protocols, Wireless Programming WEP Security. Wireless Cellular Technologies, concepts, Wireless reality, Security essentials, Information classification standards, Wireless Threats: Cracking WEP ,Hacking Techniques, Wireless Attacks, Airborne Viruses.

Unit 2

Standards and Policy Solutions, Network Solutions, Software Solutions, Physical Hardware Security, Wireless Security, Securing WLAN, Virtual Private Networks, Intrusion Detection System, Wireless Public Key infrastructure. Tools, Auditing tools, Pocket PC hacking, wireless hack walkthrough.

Unit 3

Security Principles, Authentication, Access control and Authorization, Non-repudiation, privacy and Confidentiality, Integrity and Auditing, Security analysis process. Privacy in Wireless World, Legislation and Policy, identify targets and roles analysis, Attacks and vulnerabilities, Analyze mitigations and protection.

Unit 4

WLAN Configuration, IEEE 802.11, Physical layer, media access frame format, systematic exploitation of 802.11b WLAN, WEP, WEP Decryption script, overview of WEP attack, Implementation, Analyses of WEP attacks.

Unit 5

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems. Wireless Enterprise Networks: Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Server-side programming in Java, Pervasive web application architecture, Device independent example application

Suggested Readings

- Lin, Y. B., & Chlamtac, I. (2008). Wireless and mobile network architectures. John Wiley & Sons.
- Raj Pandya. (1999). Mobile and personal communication services and systems. Institute Of Electrical And Electronics Engineers.
- Swaminatha, T. M., & Elden, C. R. (2003). Wireless security and privacy : best practices and design techniques. Addison-Wesley.

DC01FSC-5C3
Computer Security

Credit 4

Goal: This course will familiarize the students to learn, analyze and understand Confidentiality, Integrity, and Availability of the organizations systems, network and data.

Objectives:

- To identify different types of authentication techniques.
- To understand and analyze different types of Compute viruses such as Trojan horse.
- To analyze different types of security attacks.
- To understand, analyze and implement different security techniques related to operating system and networks.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

What Is Computer Security- Values of Assets, The Vulnerability–Threat–Control Paradigm. Threats- Confidentiality, Integrity, Availability, Types of Threats, Types of Attackers. Harm- Risk and Common Sense, Method–Opportunity–Motive. Vulnerabilities, Controls. Authentication- Identification Versus Authentication, Authentication Based on Phrases and Facts: Something You Know, Authentication Based on Biometrics: Something You Are, Authentication Based on Tokens: Something You Have, Access Control- Access Policies, Implementing Access Control, Procedure-Oriented Access Control, Role-Based Access Control.

Unit 2

Malicious Code, Malware—Viruses, Trojan Horses, and Worms, Technical Details: Malicious Code. Countermeasures for Users.

Unit 3

Browser Attacks- Browser Attack Types. Web Attacks Targeting Users- False or Misleading Content, Malicious Web Content. Email Attacks-Fake Email, Fake Email Messages as Spam, Fake (Inaccurate) Email Header Data, Phishing, Protecting Against Email Attacks.

Unit 4

Security in Operating Systems- Operating System Structure, Security Features of Ordinary Operating Systems, Protected Objects. Security in the Design of Operating Systems-Simplicity of Design, Layered Design, Kernelized Design, Reference Monitor

Unit 5

Network Concepts- Network Transmission Media, Protocol Layers, Addressing and Routing. Threats to Network Communications, Interception, Modification, Fabrication, Interruption, Port Scanning.

Suggested Readings

- Pfleeger, C. P. (2009). Security in computing. Pearson Education India.
- Stallings, W. (2018). Operating Systems: internals and design principles. Pearson Education Limited.

DC01FSC-5C4
Cryptography and Cyber Security

Credit 4

Goal: This course will provide students with a practical and theoretical knowledge of cryptography and network security. Students will understand the fundamental principles of access control models and techniques, authentication and secure system design. Students will have a strong understanding of different cryptographic protocols and techniques and be able to use them.

Objectives:

- Apply methods for authentication, access control, intrusion detection and prevention.
- Identify and mitigate software security vulnerabilities in existing systems.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Introduction

Security Goal, Cryptographic Attacks, Services and Mechanism, Techniques. Mathematics of Cryptography: Integer Arithmetic, Modular Arithmetic, Matrices, Linear Congruence.

Unit 2 Transformations

Traditional Symmetric-Key Ciphers: Introduction, Substitution Ciphers, Transpositional Ciphers, Stream and Block Ciphers. Data Encryption Standard (DES): Introduction, DES Structure, DES Analysis, Security of DES, Multiple DES, Examples of Block Ciphers influenced by DES. Advanced Encryption Standard: Introduction, Transformations, Key Expansion, The AES Ciphers, Examples, Analysis of AES.

Unit 3 Cryptography

Encipherment using Modern Symmetric-Key Ciphers: Use of Modern Block Ciphers, Use of Stream Ciphers, Other Issues. Mathematics of Asymmetric-Key Cryptography: Primes, Primality Testing, Factorization, Chinese Remainder Theorem, Quadratic Congruence, Exponentiation and Logarithm. Asymmetric Key Cryptography: Introduction, RSA Cryptosystem, Rabin Cryptosystem, Elgamal Cryptosystem, Elliptic Curve Cryptosystems.

Unit 4 Functions

Cryptography Hash Functions: Introduction, Description of MD Hash Family, Whirlpool, SHA-512. Digital Signature: Comparison, Process, Services, Attacks on Digital Signature, Digital Signature Schemes, Variations and Applications. Key Management: Symmetric-Key Distribution, Kerberos, Symmetric-Key Agreement, Public-Key Distribution, Hijacking.

Unit 5 Network Security

Security at the Application Layer: PGP and S/MIME: Email, PGP, S/MIME. Security at the Transport Layer: SSL and TLS: SSL Architecture, Four Protocols, SSL Message Formats, Transport Layer Security. Security at the Network Layer: IPSec: Two modes, Two security protocols, Security association, security policy, Internet Key exchange, ISAKMP.

Suggested Reading

- Forouzan, B. A. (2007). Cryptography & network security. McGraw-Hill, Inc..

DC01FSC-5C5 Data Analytics

Credit 4

Goal: This course will enable the students to familiarize with the fundamentals of computers and to learn how to install Python, start the Python shell, to perform basic calculations, print text on the screen and create lists, and perform simple control flow operations using if statements and for loops; will learn how to reuse code with functions.

Objectives:

- Apply Python syntax and semantics and be fluent in the use Python flow control and functions.
- Create and run Python Programs using Lists, Dictionaries and handle File Systems.
- Define the concepts of Regular Expressions and Object-Oriented programming as used in Python.
- Build Data Structures using Python.
- Analyze the Network Programming and Web Services in Python.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1 Planning the Computer Program

Concept of problem solving, Problem definition, Program design, Debugging, Types of errors in programming, Documentation.

Unit 2 Techniques of Problem Solving

Flowcharting, decision table, algorithms, Structured programming concepts, Programming methodologies viz. top-down and bottom-up programming.

Unit 3 Overview of Programming

Structure of a Python Program, Elements of Python.

Unit 4 Introduction to Python

Python Interpreter, Using Python as calculator, Python shell, Indentation. Atoms, Identifiers and keywords, Literals, Strings, Operators (Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator)

Unit 5 Creating Python Programs

Input and Output Statements, Control statements (Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.), Defining Functions, default arguments.

Suggested Reading:

- Budd, T. A. (2010). Exploring Python. Boston, Mass. McGraw-Hill.
- Downey, A., Meyer, C., & Elkner, J. (2016). How to think like a computer scientist: learning with Python. Green Tea Press.

Practical

Credit 2

Software Lab Based on Python:

Students are advised to do laboratory/practical practice not limited to, but including the following types of problems:

Section: A (Simple programs)

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria:
 - a. Grade A: Percentage ≥ 80
 - b. Grade B: Percentage ≥ 70 and < 80
 - c. Grade C: Percentage ≥ 60 and < 70
 - d. Grade D: Percentage ≥ 40 and < 60
 - e. Grade E: Percentage < 40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. WAP to display the first n terms of Fibonacci series.
5. WAP to find factorial of the given number.
6. WAP to implement the use of arrays in Python.
7. WAP to implement String Manipulation in python in Python.
8. WAP to find sum of the following series for n terms: $1 - 2/2! + 3/3! - \dots - n/n!$
9. WAP to calculate the sum and product of two compatible matrices.

Section: B (OOps using Python):

All the programs should be written using user defined functions, wherever possible.

1. WAP to create Class and Objects in Python.
2. WAP to implement Data Hiding in Python.
3. WAP to implement constructor and destructor for a class in Python.
4. WAP to implement constructor and destructor in Python.
5. WAP to implement different types of inheritance in Python.
6. WAP to implement concept of Overriding in Python.
7. Write programs to create mathematical 3D objects using class.
 - a. curve
 - b. sphere
 - c. cone
 - d. arrow
 - e. ring
 - f. cylinder

List of Exercises

1. Program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. Program to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria:
Grade A: Percentage ≥ 80
Grade B: Percentage ≥ 70 and < 80
Grade C: Percentage ≥ 60 and < 70
Grade D: Percentage ≥ 40 and < 60
Grade E: Percentage < 40
3. Program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. Program to display the first n terms of Fibonacci series.
5. Program to find factorial of the given number.
6. Program to find sum of the following series for n terms: $1 - 2/2! + 3/3! - \dots - n/n!$
7. Program to calculate the sum and product of two compatible matrices.
8. Program to calculate the mass m in a chemical reaction. The mass m (in gms) disintegrates according to the formula $m=60/(t+2)$, where t is the time in hours. Sketch a graph for t vs. m, where $t \geq 0$.
9. A population of 1000 bacteria is introduced into a nutrient medium. The population p grows as follows:
$$P(t) = (15000(1+t))/(15 + e^t)$$
where the time t is measured in hours. WAP to determine the size of the population at given time t and plot a graph for P vs t for the specified time interval.
10. Input initial velocity and acceleration, and plot the following graphs depicting equations of motion:
 - I. velocity wrt time ($v=u+at$)
 - II. distance wrt time ($s=u*t+0.5*a*t*t$)
 - III. distance wrt velocity ($s=(v*v-u*u)/2*a$)

Semester VI
DC01FSC-6C1

Security Threats & Vulnerabilities

Credit 4

Goal: This course will familiarize the students with business decision making and create competitive advantage with Big Data analytics and to explore the fundamental concepts of big data analytics.

Objectives

- Learn how to protect information assets against threats and vulnerabilities, to which the organization's attack surface may be exposed. Taken together, threats and vulnerabilities constitute information risk
- Analyze and understand the security objectives are met and risk mitigated will benefit an organization by contributing to: Business continuity, Operational Efficiency, Cost Effectiveness

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Threats and Vulnerabilities to Information and Computing Infrastructures: Internal Security Threats, Physical Security Threats, E-Mail Threats and Vulnerabilities, E-Commerce Vulnerabilities, Hacking Techniques in Wired Networks, Hacking Techniques in Wireless Networks

Unit 2

Wireless Threats and Attacks: Wireless Threats and Attacks, Cracking WEP, Denial of Service Attacks, Network Attacks, Fault Attacks, Side-Channel Attacks.

Unit 3

Prevention: Cryptographic Privacy Protection Techniques, Cryptographic Hardware Security Units, Client-Side Security, Server-Side Security, Protecting Web Sites, Database Security, Access Control: Principles and Solutions, Password Authentication, Computer and Network Authentication, Antivirus Technology, Biometric Basics and Biometric Authentication.

Unit 4

Detection and Recovery: Intrusion Detection Systems Basics, Host-Based Intrusion Detection Systems, Network-Based Intrusion Detection Systems, Use of Agent Technology for Intrusion Detection, Contingency Planning Management, Computer Security Incident Response Teams (CSIRTs), Implementing a Security Awareness Program, Risk Assessment for Risk Management, Security Insurance and Best Practices. Auditing Information Systems Security, Evidence Collection and Analysis Tools, Information Leakage: Detection and Countermeasures.

Unit 5

Management and Policy Considerations: Digital Rights Management, Web Hosting, Multilevel Security, Multilevel Security Models, Guidelines for a Comprehensive Security System.

Suggested Readings

- Hossein Bidgoli. (2006). Handbook of information security. Volume 3, Threats, vulnerabilities, prevention, detection, and management. John Wiley.
- Fennelly, L. (2019). Handbook of Loss Prevention and Crime Prevention. Butterworth-Heinemann Inc.
- Tipton, H. F., & Micki Krause Nozaki. (2019). Information security management handbook. Volume 2. Auerbach.

DC01FSC-6C2

Ethical Hacking and Digital Forensics

Credit 4

Goal: The aim of this course is to equip you with the knowledge and techniques to computer forensics practices and evidence analysis. It also aims at increasing the knowledge and understanding in cyber security and ethical hacking.

Objectives

- Explain different types of AI Agents.
- Define various AI search algorithms (uninformed, informed, heuristic, constraint satisfaction, genetic algorithms).
- Examine the fundamentals of knowledge representation (logic-based, frame-based, semantic nets), inference and theorem proving.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Wireless Fundamentals: Wireless Hardware, Wireless Network Protocols, Wireless Programming WEP Security. Wireless Cellular Technologies, concepts, Wireless reality, Security essentials, Information classification standards, Wireless Threats: Cracking WEP, Hacking Techniques, Wireless Attacks, Airborne Viruses.

Unit 2

Standards and Policy Solutions, Network Solutions, Software Solutions, Physical Hardware Security, Wireless Security, Securing WLAN, Virtual Private Networks, Intrusion Detection System, Wireless Public Key infrastructure. Tools, Auditing tools, Pocket PC hacking, wireless hack walkthrough.

Unit 3

Security Principles, Authentication, Access control and Authorization, Non-repudiation, privacy and Confidentiality, Integrity and Auditing, Security analysis process. Privacy in Wireless World, Legislation and Policy, identify targets and roles analysis, Attacks and vulnerabilities, Analyze mitigations and protection.

Unit 4

WLAN Configuration, IEEE 802.11, Physical layer, media access frame format, systematic exploitation of 802.11b WLAN, WEP, WEP Decryption script, overview of WEP attack, Implementation, Analyses of WEP attacks.

Unit 5

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems. Wireless Enterprise Networks: Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Server-side programming in Java, Pervasive web application architecture, Device independent example application

Suggested Readings:

- Russell Dean Vines. (2002). Wireless security essentials: defending mobile systems from data piracy. Wiley.
- Peikari, C., & Fogie, S. (2003). Maximum wireless security. Sams Pub.

Practical's:

Credit 2

Practical's using some of the well-known software's

FTK Images

Xplico

The Sleuth kit

Kali linux and its tools

The following exercises have to be performed using various software tools/ utilities mentioned

Software Tools:

1. CyberCheck 4.0 - Academic Version
2. CyberCheckSuite
3. MobileCheck
4. Network Session Analyser
5. Win-LiFT
6. TrueImager
7. TrueTraveller
8. PhotoExaminer Ver 1.1
9. CDRAnalyzer

Forensics Exercises:

I) Disk Forensics:

1. Identify digital evidences
2. Acquire the evidence
3. Authenticate the evidence
4. Preserve the evidence
5. Analyze the evidence
6. Report the findings

II) Network Forensics: • Intrusion detection • Logging (the best way to track down a hacker is to keep vast records of activity on a network with the help of an intrusion detection system) •

Correlating intrusion detection and logging

III) Device Forensics

1. PDA
2. Mobile phone
3. Digital Music
4. Printer Forensics
5. Scanner Forensics

DC01FSC-6C3
Computer Forensics

Credit 4

Goal: The aim of computer forensics is to examine digital devices in a constructive way with the goal of identifying, preserving, recovering, analyzing, and presenting the evidence in a court of law.

Objectives

To professionalize and advance the science of cyber security, digital and computer forensics and other areas of forensics

- To provide a fair, uncompromised process for certifying the competency of cyber security, digital and computer forensics examiners
- To set high forensics and ethical standards for cyber security, digital and computer forensics examiners
- Providing an understanding of the technical know-how of hackers and the counter measures against such malicious attacks.

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Unit 1

Foundations of Digital Forensics, Digital Evidence, Increasing Awareness of Digital Evidence, Digital Forensics: Past, Present, and Future, Principles of Digital Forensics, Challenging Aspects of Digital Evidence, Following the Cyber trail. Language of Computer Crime Investigation, The Role of Computers in Crime.

Unit 2

Conducting Digital Investigations-Digital Investigation Process Models, scaffolding for Digital Investigations, Applying the Scientific Method in Digital Investigations, Investigative Scenario: Security Breach. Handling a Digital Crime Scene- Published Guidelines for Handling Digital Crime Scenes, Fundamental Principles, Authorization, preparing to Handle Digital Crime Scenes, Surveying the Digital Crime Scene, Preserving the Digital Crime Scene.

Unit 3

Investigative Reconstruction with Digital Evidence- Equivocal Forensic Analysis, Victimology, Crime Scene Characteristics, Threshold Assessments. Axes to Pathological Criminals and Other Unintended Consequences, Modus Operandi, Technology and Modus Operandi, Motive and Technology, Current Technologies.

Unit 4

Digital Evidence as Alibi- Investigating an Alibi, Time as Alibi, Location as Alibi. Applying Forensic Science to Computers- Preparation, Survey, Documentation, Preservation, Examination and Analysis, Reconstruction, Reporting.

Unit 5

Applying Forensic Science to Networks- reparation and Authorization, Identification, Documentation, Collection, and Preservation, Filtering and Data Reduction, Class/Individual Characteristics and Evaluation of Source, Evidence Recovery, Investigative Reconstruction, Reporting Results.

- Vacca, J. R. (2010). Computer forensics: computer crime scene investigation. Jones and Bartlett Publishers.

DC01FSC-6C4 PROJECT

Credit 6

Goal: Using a project-learning approach can invigorate the learning environment, empowering and engaging students as they explore authentic, real-world challenges.

Project based learning is an instructional approach that lends itself easily to the creation of projects. A project is an open-ended assignment that uses technology to create a unique product that is student-driven with the goal of achieving specific learning Goal from multiple subject areas. Throughout the learning process, technology is used to acquire, organize, demonstrate, and communicate information. The seamless integration of technology into each stage of the project creates a meaningful learning experience.

Project Based Learning is personally meaningful to students because although everyone in the class may be learning the same technology skill, each student can pursue their own interests within the framework of the technology project.

Objective of the project is to provide

- A professional portfolio of projects and real experience with data analysis that will give you the necessary confidence to be successful as a Data Analyst.
- Interdisciplinary activities target learning Goal from multiple subject areas
- Simulates real problems to have students actively devise solutions
- Creates learning opportunities based upon student interest and strengths
- Engages learners by offering a meaningful learning activity
- Offers multiple ways for students to participate and demonstrate their knowledge
- Accommodates different learning styles
- Encourages the mastery of technological tools
- Prompts students to collaborate
- Offers a learning experience that draws on creative and critical thinking

Teaching Learning Methodology:

Lectures, Class discussions, reading assignments, Discussion groups, Student Presentation, Textbook assignment, Problem solving or case studies. Use of flip chart board by instructor as aid in teaching, Use of diagrams, tables, graphs, and charts by instructor in teaching. Use of displays by instructor, Use of slides, Quiz, Jigsaw and crosswords.

Course Content and Process

The students with the assistance of their faculty–in-charge or course coordinator will do the project (which may also be a continuation of their mini project or an altogether new project) individually in collaboration with an industry which would be assessed.

Total credits would be 6 (90).

The students have to submit a project report and also have to attend a viva after their project presentation.

Marks would be out of 100.

You will be working in a team, as is usually the case in the world of work. You will be supervised by a tutor, who is always available to answer any questions or clear up any doubts, and who will assess your performance and advice on the project "deliverables". The project work

is an educational pedagogy that enables a student in learning-by-doing approach in all its complexity and scope.

At the start of the course you are assigned a tutor who is a professional expert. The tutor will foster teamwork and promote discussion of issues, helping you find Syllabus: Data Analytics & Big Data solutions and resolve the difficulties of the project by drawing on your own resources. They will give you feedback on the “deliverables” for each project at every stage, so that you can continually refine them, learning from your mistakes and achieving the mastery needed for each task.

Some topics:

Modern scientific instruments and Internet-scale applications generate voluminous data pertaining to vital signs, weather phenomena, social networks that connect millions of users, the origins of distant planets. Data produced in these settings hold the promise to significantly advanced knowledge.

Fundamental issues in Cyber Security and Cyber Forensics

Issues related to data organization, storage, retrieval, analysis and knowledge discover at scale.

This will include topics such as large-scale data analysis, data storage systems, self-descriptive data representations, semi-structured data models.

Will involve hands-on programming assignments and term project using real-world datasets.

DC01FSC-6C5

Ethics in Information Technology and Computer Communication

(Total Hours 30)

Goal: To develop ethics related to computer profession and development.

Objectives: Objective of this course is to expose the students

- To ensure the privacy and safety of the computer users.
- To help people, use the computer in the right ways.
- To guarantee that the works that done by someone did not declare by other people.

Teaching Learning Methodology:

Lectures, Class discussions, Discussion groups, Student Presentation, case studies. Use of flip chart board by instructor as aid in teaching.

Unit 1 Risk and Responsibility

In this segment of the course we evaluate the risks of computer technology. Some of these risks are the results of imperfections in the technology itself, while others are the consequence of human misunderstandings and misinterpretations. We will ask questions such as: how to assess the gravity of risks against the clear benefits of computer technology? Who bears the risks and who should be making the decisions about whether they are acceptable? Is computer technology in any way a unique technology in the nature and extent of the risks it poses?

Following the discussion of risk, we examine responsibility. Who is responsible for risks and harms caused by computing? What are the special responsibilities, if any, of computer professionals? Beyond the responsibility to produce systems that work, do computer professionals have a social responsibility to see that their technology is used only for the betterment of society? We will apply legal and philosophical concepts to these discussions.

Unit 2 Ethical Theory

Ethical theories and concepts from the Western philosophical tradition offer ways to analyze and clarify practical questions about values and information technology. In this segment of the course we review two basic approaches to ethical theorizing: deontology and consequentialism. We also study the concept of rights and justice. These enhance our understanding of the many issues in information technology ethics that are framed in terms of "rights": the right to own software, the right to privacy, and the right to benefit from computing. We also examine the relationship between law and morality. The theoretical approaches and concepts will be applied and developed throughout the rest of the course.

Unit 3 Intellectual Property and Computer Software

Is it wrong to make unauthorized copies of software? Should software be free? Is the patenting of software good for society? These are some of the questions addressed in this section on the private ownership of computer software. Although much of the scholarly work in the area of software ownership is concerned with detailed legal questions, we will focus on its philosophical and ethical aspects.

Unit 4 Privacy and Information Technology

Poll after poll show that Americans are concerned about the erosion of their privacy. They think the government knows too much about them and they are becoming increasingly aware of the many other institutions that have access to their records. Information technology is at the heart of many of these intrusions on privacy. This section of the course examines the use of computerized record-keeping and its effects on privacy. Drawing on moral and legal understandings of privacy, it evaluates the claims by individuals in technologically advanced societies to be free of surveillance.

Unit 5 Crime by Computer

Reports of computer crime elicit a mixture of reactions. On the one hand, people are worried about how vulnerable society's computerized infrastructure is to infiltration and destruction. On the other, they are impressed by the ingenuity of the so-called "hackers." How should we regard infiltration onto computer systems? What computer crimes are really bad? Are hackers mere villains or are they Robin Hoods?

Unit 6 The Networked World

More than any other application of computer technology, digital networks have captured the public's fascination and imagination. But is all of the attention warranted? Will computer networks transform society, revolutionize social institutions, remake communities and the political landscape, and change the world economy; or will they merely provide new outlets for consumerism and entertainment? How much should society invest in the new networks? Should the government ensure universal access to networks even to those who cannot afford to pay the cost?

The final segment of the course will discuss these questions and others. It will evaluate debates about civil liberties, like free speech, on the internet. What rules should govern behavior on the internet? We will also consider the effects that networks may have on fundamental values such as privacy and property.

Tuesday	Data Structures	Operating System		Introduction to cyber forensics and cyber laws		Forensic Dermatoglyphics (Lab)	
Wednesday	Research Methodology	Data Structures		Library		OS (lab)	
Thursday	Forensic Dermatoglyphics	Introduction to cyber forensics and cyber laws		OS (lab)		Forensic Dermatoglyphics (Lab)	
Friday	Data Structures	Operating System		Forensic Dermatoglyphics		OS (lab)	
Saturday	Operating System	Introduction to cyber forensics and cyber laws		Mentoring		Forensic Dermatoglyphics	Research Methodology

Timetable – IV Semester BSc (Cyber Forensics, Data Analytics and Cyber Security)

	I	I		III	IV	V	VI
	9.30am - 10.30am	10.30am - 11.30am	11.30am - 11.45am	11.45am - 12.45pm	12.45pm - 1.45pm	01.45pm - 2.45pm	2.45pm - 3.45pm
	Biometric	Mobile forensics	K	Programming in	Python	Java (lab)	

Monday	security			java		
Tuesday	Programming in java	Computer networks		Open Elective II		Biometric security (Lab)
Wednesday	Mobile forensics	Biometric security		Mentoring		Java (lab)
Thursday	Computer networks	Programming in java		Mobile forensics		Biometric security (Lab)
Friday	Biometric security	Open Elective II		Library		Java (lab)
Saturday	Programming in java	Mobile forensics		Biometric security		Biometric security (Lab)

Timetable – V Semester BSc (Cyber Forensics, Data Analytics and Cyber Security)							
	I	I I		II I	IV	V	VI

	9.30am - 10.30am	10.30am - 11.30am	11.30 am - 11.45 am	11.45am - 12.45pm	12.45pm - 1.45pm	01.45pm - 2.45pm	2.45pm - 3.45pm
Monday	Preserving And Recovering Digital Evidences	Mobile And Wireless Security	Snack Break	Computer Security	Lunch Break	Data Analytics (lab)	
Tuesday	Mobile And Wireless Security	Cryptography And Cyber Security		Data Analytics		Data Analytics	Student Wellness
Wednesday	Computer Security	Mobile And Wireless Security		Preserving And Recovering Digital Evidences		Data Analytics (lab)	
Thursday	Cryptography And Cyber Security	Data Analytics		Mobile And Wireless Security		Mentoring	Library
Friday	Computer Security	Preserving And Recovering Digital Evidences		Cryptography And Cyber Security		Data Analytics (lab)	
Saturday	Computer Security	Cryptography And Cyber Security		Preserving And Recovering Digital Evidences		Activity	Data Analytics
Timetable – VI Semester BSc (Cyber Forensics, Data Analytics and Cyber Security)							
	I	I		II	IV	V	VI
	9.30am -	10.30am	11.3	11.45am -	12.45p	01.45pm -	2.45pm -

	10.30am	- 11.30am	0 am - 11.4 5 am	12.45pm	m - 1.45pm	2.45pm	3.45pm
Monday	Security Threats And Vulnerabilities	Ethical Hacking And Digital Forensics	Snack Break	Computer Forensics	Lunch Break	Ethical Hacking And Digital Forensics (Lab)	
Tuesday	Computer Forensics	Library		Security Threats And Vulnerabilities		Ethical Hacking And Digital Forensics (Lab)	
Wednesday	Ethical Hacking And Digital Forensics	Security Threats And Vulnerabilities		Computer Forensics		Ethical Hacking And Digital Forensics (Lab)	
Thursday	Ethical Hacking And Digital Forensics	Computer Forensics		Ethics		Project	
Friday	Security Threats And Vulnerabilities	Ethical Hacking And Digital Forensics		Ethics		Project	
Saturday	Project			Project		Project	

The Yenepoya Institute of Arts, Science, Commerce and Management

Balmatta, Mangalore

Undergraduate Programme Academic Calendar for the admission year 2020-21

Name of the Course: -	
1. B. Com (Finance, Taxation and Auditing)	
2. B. Com (International Management Accounting)	
3. B. Com(Honors) (International Accounting and Finance)
