ADD-ON COURSE IN MINOR ORAL SURGERY

1. Preamble

For a smooth transition from academics to real life work environment, it is essential to develop critical thinking abilities among interns and to imbibe relevant practical skills.

With increase in lifespan and a proportional increase in systemic illnesses, it is of utmost importance for every dental surgeon to possess the basic knowledge required for the early recognition, diagnosis and management of medical emergencies in dental practice. Dentists, who are well versed with the anatomy of the orofacial region, are often the first to encounter a patient with orofacial trauma and hence it is essential for them to be familiar with dental wiring and suturing, which are essential skills in the primary management of such patients.

2. Course Objectives

- a) To give an insight into the medical and dental emergencies that can occur in practice,
- b) To provide hands on training on suturing & dental wiring,
- c) To give an overview of the various minor oral surgical procedures and prevention and management of associated complications.

3. Course content/Syllabus

- a) Duration - 2 day course (17 hours)
 - 6 hours of theory
 - 3 hours of hands on training
 - 4 hours of video demonstration of minor surgical procedures
 - 1 hour lecture on IV and IM techniques and Basic Life Support at the simulation centre.
 - 2 hours hands-on training in Basic Life Support and IM and IV demonstration at simulation centre
 - 1 hour- assessment and feedback
